Besonderheiten:

Ausrüstung:

Charakteristik: (Ersatzübersetzung)
Two ravines on the same river. The upper part is very alpine, with long rappels and somewhat precarious facilities. The lower part, which is usually combined with the malmarrui much simpler with a fairly open first part and little by little it is boxed in.
Caution with the flows of the spring with the thaws.

Hydrologie:

Anfahrt: (Ersatzübersetzung)
Location Aneto village
On the N230 between Pont de Suert and Vielha.
At pk 140, just before reaching Senet and Aneto we have the bridge over the river Llauset, parking area for the return of Llauset Inf.
We will continue until Senet and the detour to Aneto. We will cross the beautiful village of Aneto and continue along the road that goes up to the Llauset reservoir, soon we have a sharp right turn and a signpost to the Azud de Morelló, here we park the car for access to Llauset inf.
If we follow the road up to 1950m from where we can see the final waterfalls and the Llauset dam. There is a hut and a place to park the return car (or if we only have one) from Llauset superior.
And following the road a little more we reach a fork that we take to the left and we get into the tunnel that leads to the reservoir that is the access parking Llauset sup.

Zustieg: (Ersatzübersetzung)
Access to Llauset Inf, Sup and Malmarrui Inf and Sup
To access Llauset sup from the dam, go down the rocky path next to the gate along the GR to the river.
If we go with only one car, from the lower parking the GR goes out towards the dam, we only have to follow it until we overcome the waterfalls, just the place where the water appears.
To access Llauset inf we will take the path that goes down to the ravine through the Morelló channel/dam. If it is closed the water will go down the ravine and the flow will be greater.

Tour: (Ersatzübersetzung)
The upper part is the typical alpine canyon in V that we almost always have the option to get out halfway up the slope. Long waterfalls and a wild and spectacular environment.
The lower part is much more dense, more dressed and boxed. Generally without water problems thanks to the dam and the upper dam. The final exit through the dam is an experience

Rückweg: (Ersatzübersetzung)
From the upper Llauset after the last waterfall we will turn left to take the path back up.
From the lower Llauset we will go left to the bridge over the road.

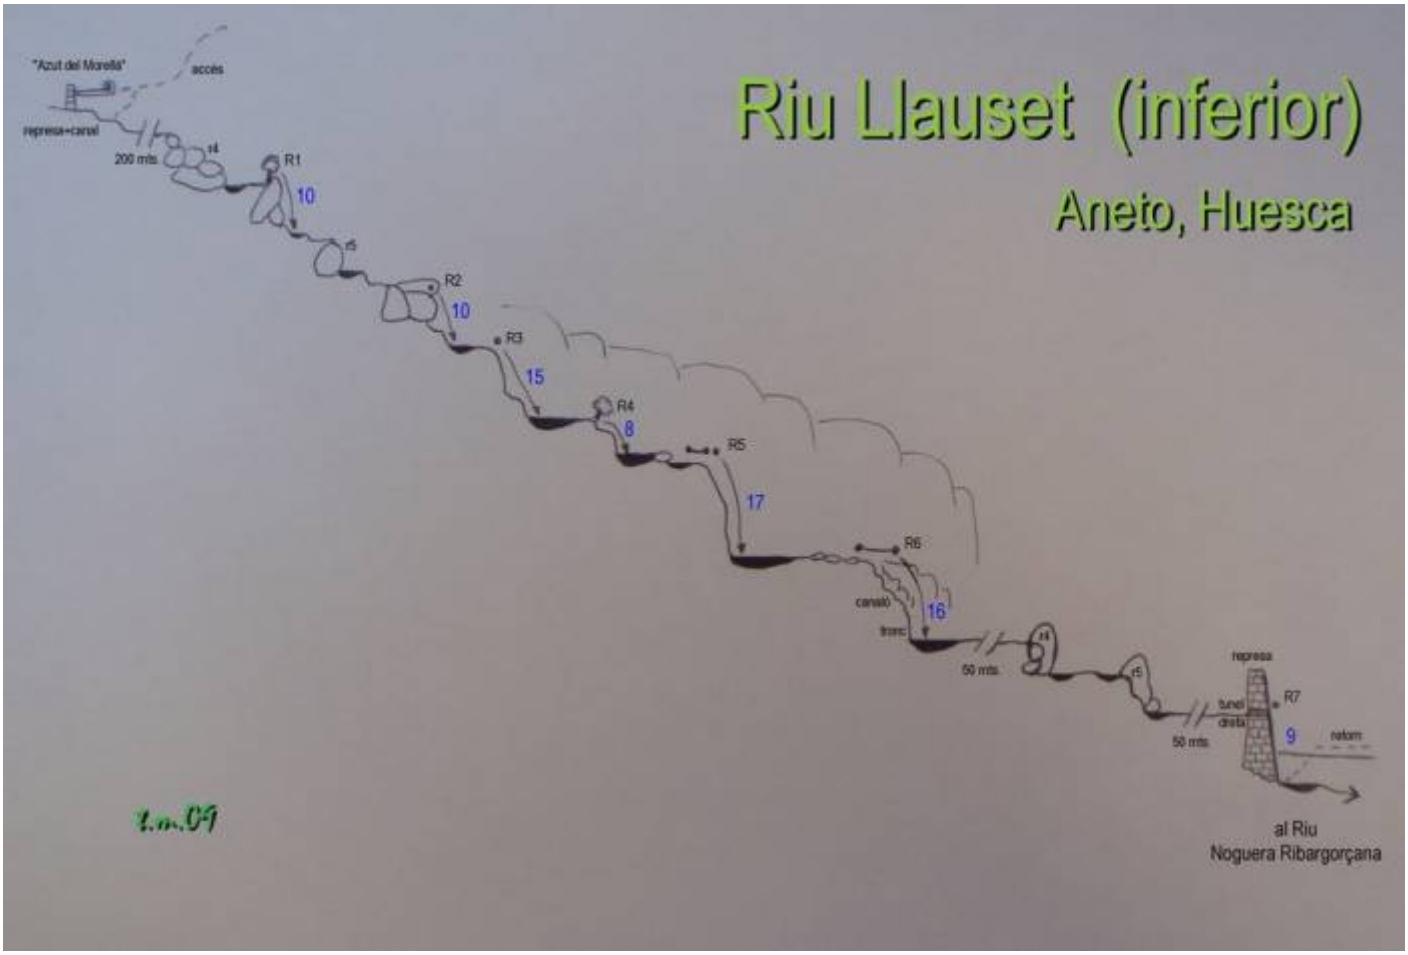

Koordinaten:
Canyon Start 42.5535 0.7191
