Automatisch importiert von Descente-Canyon.com für Canyon Verdon Parcouru à partir de mainmorte (canyon sec affluent), jour de bas débit du barrage de Castillon (bien se renseigner) avec des personnes qui connaissaient les endroits dangereux (nombreux risques, notamment siphons et placages sous parois même avec ce bas débit). L'eau du Verdon est plutôt froide, surtout quand on trempe dedans pendant 2h. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/23208/observations.html)
