Summary: (machine translated)
Overall short canyon with jump and slide opportunities.

Hydrology: (machine translated)
Schronbach gauge: https://www.hnd.bayern.de/pegel/isar/sylvenstein-16312008

Access: (machine translated)
From Bad Tölz on the B13, past Lenggries to the Sylvenstein reservoir. From the Inntal on the B181 to Achenkirch and after Achenwald turn left onto the B307 (direction Bad Tölz) to the dam of the Syvenstein reservoir. 400m north of the top of the dam (western exit) the B13 crosses the Schronbach. 30m further north we find a large parking bay east of the road where we park the car. From the nearby road bridge we can easily judge the water flow.

Approach: (machine translated)
We go on the B13 170m in the direction NNO slightly downhill and turn left before the Isar bridge on a slope. Also here you could park the car well at the B13. We follow now the runway 1 km and turn then on the left branching field way. On this we come after another 150 m to a relatively elaborate gauge measuring point. In front of the metal bridge we go down on a ladder into the streambed. We can also enter 50m further upstream and start with a small jump.

Tour: (machine translated)
First about 300m almost level in the streambed, until the beginning of the drop. Here first some possible jumps, then the 20m rappel (caution: small cavity under the spray). 2 (bumpy) slides follow, then another rappel under the road bridge.
Beyond the underpass left out to the car or still go down the final waterfall or rappel (almost 30m !).

Return: (machine translated)
At the latest now left out to the car.
