Country: Italia / Italy **Region:** Trentino-Alto Adige **Subregion:** Bolzano **Town:** Brennero		
Difficulty: difficult	**Grading:** v5 a3 III	**Total time:** 3h45
Approachtime: 1h	**Tourtime:** 2h30	**Returntime:** 15min
Altitude entry: 1560m	**Altitude exit:** 1360m	**Delta Altitude:** 200m
Canyon length: m	**Highest rapell:** 50m	**Amount rapells:** 8
Transport: on Foot	**Rock type:** slate	**Drainage area:** km²
Season: May - November	**Orientation:** South	**Best Time:** 11-16 o'clock
Rating: ☆ 3 (2)	**Info:** ★ 2 (2)	**Belay:** ★ 2 (2)

Specialities:

Gear:
Ropes: 2*60, 1*30

Summary:
Short but vertical canyon below the Tribulaun with nice water colours. Prone to floods that destroy the anchors. Rebolted in 2026, but in two occasions trees are the better option, a min. climbing skills required to reach. The last waterfall is clearly visible from the village.

Hydrology:
Small water catchment area, though with big walls, and a rocky riverbed. High chances of flood.

Access:
Park in San Antonio below the church, hike up from there

Approach:
On foot, behind Aktiv Hotel starts the trail towards Tribulaunhutte.

Tour:
First some smaller obstacles, but rather continuous, bolted with 10mm inox or by using the trees (climb max. 4b to reach - when the rock does not allow for anchoring). The 70m waterfall is bolted on the right, by ice climbers, and is broken down into 20+50m.

C10 right 1 bolt Tebylon Emerald
C15 right tree w. Kordas & quicklink
C15 left 1 bolt double ring
Tributary on the left
Dc + walk 50m
C20 right tree w. Kordas & quicklink (climb 4b)
Stay in rope until you find next anchor low left
C20 left 2 bolts one w.ring (below damaged bolt)
Walk 20m + Dc left 3m
C25 right 2 bolts w.ring
C20 right 3 bolts (mix of metals & rope) one new
C50 right 2 bolts (originally a mix of metals) one w.ring

Return:
After the c50 downclimb + walk the river bed to exit left bank towards the trail of the approach.

Coordinates:
Canyon Start 46.9688 11.3477

Finished rebolting. Added slings + quicklinks for the trees, and doubled the higher abseils. Anchors are well protected, sometimes slightly harder to reach, at one occasion one should remain in the rope to reach the next anchor. I copy the sequence hereafter and to the file. Flow is normal after the rain, the main river however is swollen & brown (afternoon especially). C10 right 1 bolt Tebylon C15 right tree w. Kordas & quicklink C15 left 1 bolt double ring Tributary on the left Dc + walk 50m C20 right tree w. Kordas & quicklink Stay in rope until you find next anchor low left C20 left 2 bolts one w.ring (below damaged bolt) Walk 20m Dc left 3m C25 right 2 bolts w.ring C20 right 3 bolts (mix of metals) one new C50 right 2 bolts (originally a mix of metals) one w.ring Dc, walk and exit left to the trail & hotel

All original anchors were destroyed. The first 4 obstacles were without traces. Only in the last 60-70m waterfall (thanks to iceclimbers that bolt well away from the flow) there was something useable. Newly bolted multiple anchors (well protected, a bit hidden) with 10mm inox, if not just used trees. Thanks to CanyonZone & Tebylon for the gear. Replaced the rusty steel for inox in the big drop and removed fixed ropes. Looking forward to repeat it. Maybe late summer if the nearby Fernerbach should have too high water.
