Country: Italia / Italy **Region:** Piemonte **Subregion:** Vercelli **Town:** Campertogno		
Difficulty: a little difficult	**Grading:** v4 a3 III	**Total time:** 4h5
Approachtime: 1h	**Tourtime:** 3h	**Returntime:** 5min
Altitude entry: 1080m	**Altitude exit:** 845m	**Delta Altitude:** 235m
Canyon length: 1000m	**Highest rapell:** 45m	**Amount rapells:** 14
Transport: on Foot	**Rock type:** gneiss	**Drainage area:** 3.00km²
Season: May - October	**Orientation:**	**Best Time:** 9-14 o'clock
Rating: ☆ 3.7 (10)	**Info:** ★ 2 (5)	**Belay:** ★ 2.3 (6)
Specialities:		

Gear:
Ropes: 1x70 m + 2x60 m

Summary:
A vertical canyon with several interesting rappels—most notably a sequence down a 70-meter waterfall. There are two possible slides; from July onwards, there is not much water.

Hydrology:

Access:
Reach Campertogno; you can park in the campsite parking area by heading down to the left, or alternatively in the cemetery parking lot—cross the bridge and then turn left at the junction where the road goes uphill.

Approach:
Take the path toward "Argnaccia"; after 50 meters, turn left onto the flat meadow, following blue markers. Once you enter the woods, follow the only path available until you reach a lovely wooden house. From there—continuing to follow the blue markers—descend along a trail that leads to the stream in about 5 minutes.

Immer den blauen Punkten folgen.

Tour:
The first waterfall is descended from a tree; if the pool is deep enough, it can be a toboggan. Next, you reach R15 right. You then arrive at the top of a 70-meter waterfall: it is recommended to descend on the right, using the first two set-back anchor points (R15, left) to reach R28 (right) located after a hanging pool; from there, you reach R45, right. Alternatively, you can descend on the left, staying out of the water flow, using a 12-meter handline (left) followed by R30 + R40 left. Further on, you encounter a 7-meter handline (right) leading to R16, right; a 10-meter handline (left) leading to R14, right; and a 5-meter handline (left) + R10 (left)—you rappel into a gap between the boulders. After a short walk—with an optional 3-meter rappel (where a jump is also possible)—you reach a confluence with another stream, which doubles the water flow. You then encounter a 12-meter handline (right) + R10 right, followed by a 2-meter handline leading to R10, left (it can be a slide starting from halfway down). Then a 7-meter handline (left) + R30 left, a 3-meter handline (left) leading to R20 left, and another 3-meter handline (left) + R25, left).

Return:
After the last rappel, take the path on the right, and immediately a dirt road, follow the road until the bridge that leads to the campsite.

Coordinates:
Canyon Start 45.7952 8.0234
Canyon End 45.7956 8.0295
Alternative Canyon Start 45.7944 8.0255
Parking Entry and Exit 45.7971 8.0325

The last stream in Valsesia for this year The start is beautiful—the 70-meter waterfall is a real gem, climbed on the right side right in the flow. Thanks for the new belay stations... Too bad the next section loses a bit of its appeal, but the final series of rappels picks up the pace again. The anchors are in great shape, and the approach is well marked. Anyway, thanks to Bina X for the GPS track. (machine translated)

A new rappel line has been set up to the right of the 70-meter waterfall; now you can rappel all the way down beneath the flow. The new sequence is: C15 left (the two rear anchor points with quickdraws, to enter the initial gully) + C28 right + C45 right. Very little water today. (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Laghetto We found the route easily. https://loc.wiki/t/275386515?h=epodragwvm&wa=sd&la=de A nice tour up to and including the confluence, less so in the middle. Unfortunately, you can't rappel the 70-meter section in the water because there's no anchor point (only two unusable screws) at the outflow on the right, and from the first anchor point behind, we couldn't pull the rope down from the intermediate anchor on the right. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22975/observations.html)

We found the route easily. https://loc.wiki/t/275386515?h=epodragwvm&wa=sd&la=de A beautiful route up to the 70er and past the confluence; less scenic in the middle. Unfortunately, you can’t rappel down the “70er” in the water because there’s no belay point at the outlet on the right (only two unusable bolts), and from the first belay point at the back, we couldn’t pull the rope off the intermediate belay point on the right. Automatisch importiert von Descente-Canyon.com für Canyon Laghetto Quelques passages mignons mais alterné avec d'autres qui cassent le rythme. Pleins de fleurs partout avec des relais qui sentent le lys, les myrtilles et les fraises des bois. Très bien équipé mais pas toujours logique, faut chercher. Pour le chemin d'accès à la dernière maison du village, couper dans le champs vers la gauche, peu visible avec quelques points bleu. Arrivé à la superbe maison avec point de vue, passer à gauche de la maison et chercher la descente vers le canyon. Toujours avec des points bleu. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22975/observations.html)

Added 2 anchor points for a handrail on a slippery ledge just before the 70-meter waterfall section Otherwise, the anchors are fine; it’s still a nice, continuous stream with some interesting sections. Thanks to Paolo, Pierluca, and Fabio for the day (machine translated)

Came in Valsesia again after our Summer trip... High flow in this canyon, especially in the 70 m waterfall where it's concentrated in a sort of tube... Funny and a bit technical The 2nd section has the flow doubled but the verticals are easier... Would be great the 70 m all bolted in the water flow.

Gorge with some quite technical points, like a really very aerial belay (on overhang) under a boulder; after a while the harness starts to hurt... and a mancorrente right after that is "slippery" The 70 m waterfall is very nice it is a pity it is not rigged all in the stream; I tried the toboggan in the last meters, you have to stay perfectly closed because it is very narrow the tube where the water goes down. The stream is continuous and pleasant all the way down. Weapons ok only some a bit rusty, mostly chains with ring. (machine translated)
