Unfortunately, the canyon was dry; if it had water, the rating would likely be better. The descent points were in acceptable condition, with a few descents from trees. (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Kostalexi (amont) A lot of effort for only 200meter that is a really beautiful section. A good badweather day option. - the map of the topobook is not super clear. We parked 200 meter after the sheep meadow (38.8420195, 22.3298769). Without 4x4 maybe leave the car just before. From this point we walked 30meters down to the beginning of the riverbed. We followed this one for 30minutes (used the rope 2 times, but also possible to climb down). Then you will reach the first big drop of 20meter (tree RD). After this you will find the first anchor quite soon. - everything except the 55m is mono point, but all good quality- we added a few new anchors on the places where they where missing- also a new one (RD) at the 26m rappel in the beautiful part. So you don't need to take the tree anymore from the rappel before. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/21465/observations.html)
