Country: Italia / Italy Region: Friuli Venezia Giulia Subregion: Udine Town: Lovea		
Difficulty: a little difficult	Grading: v4 a4 III	Total time: 4h
Approachtime: 0min	Tourtime: 3h15	Returntime: 45min
Altitude entry: 800m	Altitude exit: 440m	Delta Altitude: 360m
Canyon length: 800m	Highest rapell: 40m	Amount rapells: 9
Transport: Car optional	Rock type:	drainage area: km ²
Season:	Orientation:	Best Time:
Rating: ★ 3.7 (8)	Info: ★ 3 (5)	Belay: ★ 2.7 (6)
Specialities:		
Gear: Ropes: 2x40m		
Summary: (machine translated) Beautiful aquatic canyon in friable limestone; standings need improvement; cold clean water; large catchment area; challenging single passages at high water levels; possible exit about 550m.		
Hydrology:		
Access: (machine translated) about 30min. From Tolmezzo take the SS52b direction Arta Terme/Austria. Approx. 4,5Km after the gas station (near Tolmezzo) turn right towards Paularo into the Chiarzo Valley (SP23). In the village of Piedim, cross the bridge over the Torrente Chiarzo on the right. After the bridge, immediately turn left and follow the dirt road until you reach Rio dell'Ambruseit. The shuttle car can be parked right next to the stream. Take the 2nd car back to the main road. Here continue upstream on the right. After a short distance turn left towards Lovea. Follow the winding road towards Lovea. Shortly before Lovea turn left and drive uphill (no driving sign). At the next fork, turn left again and follow the road to the stream (Rio dell'Ambruseit). Park directly in front of the stream (approx. 800m). Alternative where you save about 45min river walk but with 25min ascent: You don't park the car as described above, but go straight to Lovea. Shortly before the village drive up on the left (no driving sign). After 4 haipin bends there is a small turnout and a small asphalted road on the right. Here you come to the small group of houses "Stavoli Nivuae". Here, right by the first houses, there is an asphalt parking lot (on the right) where the locals are not disturbed. Park here most of the cars and with as few cars as possible return to the small road where you turned right before. Continue uphill to the right until you reach the creek. Park here.		
Approach: (machine translated) approx. 0min From the parking lot enter directly into the stream.		

Tour: (machine translated)

about 3-3,5h

The Rio dell'Ambruseit is fed by 2 larger and several smaller tributaries and therefore always has good water. The water level is best judged at the first 5m step, at the entry. Here the water should not walk more than 2/3 of the width of the step over the edges. After the first step follows about 200m of block terrain to the next drops of 25 and 40m. At the 40m waterfall an intermediate stand right can be useful to not get the full water load off. After that there are several small steps (max 10m) which can be rappelled, downclimbed or jumped according to your own assessment. A rappelling point of 25m is striking, which first leads into a deep pool in order to continue rappelling refreshed. This is followed by a longer walking passages over block terrain which is interrupted by a small step (8m rappel or 2m jump). At the next 30m rappel you are again directly in the watercourse (here you can alternatively rappel right from a tree). Depending on the water level, the deep pool has a receding current. After this point comes a longer walking passages over boulder terrain before the canyon narrows. The last 4 steps of the narrower gorge section are quickly mastered (2x rappel, 1x jump, 1x downclimb). Now you follow the course of the stream for about 45min without great difficulty to the exit / shuttle car at 440m (alternative: see exit / way back).

Return: (machine translated)

approx. 45min/50min

1st option (50 min): Stay in the canyon and hike out the streambed for about 50min from the last rappel.

2nd possibility (45 min): At about 550m, in the streambed on the right side of the slope, you will come across a large rock with blue rappel markings (after about 20 min of walking in the canyon after the last rappel). Up the slope you can see an old ruin on the left. The path was newly equipped with blue markings on the trees in May 2022. You first follow the streambed upstream for about 50m in the forest and follow the blue markings steeply uphill at first. After that you come to a recognizable path that after about 25min leads to the group of houses St. Nivuae where previously the shuttle cars should be parked.

Reports:

2024-12-30 | Wolfgang | ★★☆☆ | 📖 | 📍 | ⚓ ★★ | 🌊 Low | 🍏 Completed

At this time of year practically no sun in the canyon; therefore a lot of ice or stones covered with an ice film,...so the bit slippery is already the lesser evil. Because of the constant "danger of slipping" it was exhausting, but once again it was fun (machine translated)

2024-06-27 | Bernhard | ★★☆☆ | 📖 ★★ | 📍 ★★ | ⚓ ★ | 🌊 High | 🍏 Completed

Very slippery in places Many jumps doable (we jumped the 15?!) Nice open fun canyon which has a very tough walking passages at the end Water level no problem as the stands are always outside the water flow or possible (often one direct and one bypass) (machine translated)

2023-12-30 | Rok | ★★☆☆ | 📖 ★★ | 📍 ★★ | ⚓ ★★ | 🌊 Normal | 🍏 Completed

Not at all slippery now due to the floods in Friuli. The pools, which were still all jumpable without any problems in July, are now partly full of gravel. At the last narrow passage there was a large rockfall (there is still a large rock hanging directly at the 90 degree bend where you actually abseil directly underneath (see photo). Otherwise everything is great. (machine translated)

2023-12-30 | Horst Lambauer | ★★☆☆ | 📖 ★★ | 📍 ★★ | ⚓ ★★ | 🌊 Normal | 🍏 Completed

Alles tip top

2023-07-17 | Rok | ★★☆☆ | 📖 ★★ | 📍 ★★ | ⚓ ★★ | 🌊 Normal | 🍏 Completed

Currently so of slippery and slippery, but super water throughput. At the 3rd stand we had to really strain to get out of the water to the stand. All stands ok. Abseiling partly only on 1 hook, but these perfectly set and very good condition. Great canyon. (machine translated)

2023-06-04 | Horst Lambauer | ★★☆☆ | 📖 ★★ | 📍 ★★ | ⚓ ★★ | 🌊 Normal | 🍏 Completed

Exit description adapted to actual Gegenbenheiten (time information was not correct). My recommendation to stay in the creek bed, you have 5 min longer to go, but not uphill in the bushes. The only disadvantage is that you have to shutteln about 10min longer. Have drilled at the 40m rappel below a ring to be able to build a cable car (the old one was gone). Otherwise everything Tiptop. Photos added of the first rappel regarding water level control. Here the walk was ok, only at the 40m rappel we have built the ropeway for not so experienced, because but much water pressure was during the abseiling. (machine translated)
