Summary: (machine translated)
Narrow parts. Large volumes of water even under normal conditions.
Dangerous narrow sections and backwaters / rollers.

Hydrology: (machine translated)
Returns / rollers, lots of water overall

Access:

Approach: (machine translated)
Enter the stream a little above the bridge.

Tour: (machine translated)
Starts with a few easy/short rappels in the open streambed. This is followed by a fairly long running section.
This is followed by some more short rappels until you reach the exit at the metal footbridge.

Return: (machine translated)
After the last rappel, exit at an irrigation ditch - follow the metal footbridge. Continue through a gate towards the already visible farm. Less than 100m after the farm, the descent path through the forest begins on the left and leads directly to the road where the car was parked.

I went down yesterday when the water level was low; when the flow is good, some sections become very watery, and getting out of the pools is definitely no easy task. The anchors are decent—they could be improved in some spots, but for now they do the job. It’s a very beautiful gorge, though, with some quite deep pools. There might be several possible dives, but the pools are hard to inspect and the water is very murky. We exited at the water diversion and, from the gate, walked down past the house in the middle of the countryside. About 100 meters past the house, a trail descends to the left, leading directly back to the car—very convenient. (machine translated)

Descended with plenty of flow,we also wanted to descend the lower part but for us the flow was too much. Weapons sometimes a little hard to find and in um little uncomfortable positions. Below are two photos with normal/low flow and on the right when we descended (machine translated)

Presence of strong current in pools, be careful. Long stretches of walking. Some rusty anchors. Muddy water with little flow in second part of canyon. (machine translated)

New anchors set. Quite long runs. Individual spots nice. Water not a problem in terms of quantity but unfortunately sanded up and cloudy. Went as far as the water outlet with metal bar. Not set up below. The way down to the village can be found on wikilogs. (machine translated)
