Country: Italia / Italy **Region:** Piemonte **Subregion:** Torino **Town:** Noasca		
Difficulty: a little difficult	**Grading:** v4 a3 III	**Total time:** 4h30
Approachtime: 50min	**Tourtime:** 3h30	**Returntime:** 10min
Altitude entry: 1280m	**Altitude exit:** 1130m	**Delta Altitude:** 150m
Canyon length: m	**Highest rapell:** 60m	**Amount rapells:**
Transport:	**Rock type:**	**Drainage area:** km²
Season:	**Orientation:**	**Best Time:**
Rating: ☆ 4.3 (4)	**Info:** ★ 2 (1)	**Belay:** ★ 3 (1)
Specialities:		
Gear:		
Summary: (machine translated) A granite rappel canyon; possible jumps. One of the best canyons in western Italy.		
Hydrology:		
Access: (machine translated) Coming from Ivrea or Turin we approach the valley of Torrente Orco. On the SP460 past Cuorgne and Pont Canavese we drive up the Orco valley to Noasca (about 25 km from Pont Canavese - see also map in photo gallery). In the center of the village we find a parking place for our car.		
Approach: (machine translated) We take the trail that starts at the church (1055m altitude) and also leads to the final waterfall of Noaschetta. However, before reaching the waterfall we turn right and climb on ribbons through the rock walls up to Alpe Sengie (1300m altitude). We take the path that passes below the houses and heads towards the stream. At the footbridge that crosses the stream in the course of the path we enter - see also wikiloc.		
Tour: (machine translated) 9 rappels; after 4 rappels, before the difficulties begin with strong water flow, possible exit to the right (see topographic view). The descent is now in a chute. The exit from the pool after the 25m rappel is not without problems. The 60m - final rappel is broken on the topographic view (15/50). From the pool under this waterfall we come out to the left on the path that leads from the village to the waterfall.\n		
Return: (machine translated) On this path down to Noasca.		
Coordinates: Canyon Start 45.4577 7.3135 Canyon End 45.4556 7.3127

Automatisch importiert von Descente-Canyon.com für Canyon Noaschetta (inférieur) Nach 3 Tagen beobachten, ist heute der Wasserfall um die Hälfte geschrumpft. Nach dem Telefongespräch mit dem Kraftwerk entschlossen wir uns auf eine Begehung zu verzichten; angeblich sei es verboten, angeblich kann der Wasserstand sehr schnell ändern (besonders am Wochenende) und angeblich habe das Elektrizitätswerk keinen Einfluss auf die automatische Wasserregulierung..... (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22940/observations.html)

Currently the canyon is in high flow / overflowing. According to locals probably the water outtake is now open. We plan to find out tomorrow. There is a webcam in Noasca allowing to check the flow. Will share the link. In any case, the hydraulic systems in this valley are nervewrecking and should be carefully evaluated.

Good water level. We installed some anchors and added one bolt to the exit to reach the second anchor. Always pay close attention to weather conditions and possible storms, given the presence of an automated dam upstream. We recommend taking the right-hand exit to reach the anchor for the 40-meter descent. (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Noaschetta (inférieur) Fait en intégral, sans navette, 1h de marche. appeler la centrale avant, même s'il vont dire qu'ils ne peuvent rien garantir, mais au moins Ils savent qu'il y a quelqu'un. équipement nickel, il manquerait juste 1 point dans le sup pour éviter une désescalade un peu expo. Partie sup sans grand intérêt, partie inf unique, exceptionnelle... Équipement au top! Je ne comprends pas le dernier commentaire de Paco, l'équipement en place est là depuis longtemps sans aucun doute... Et la C60 avait 5 points. Il faut peut-être mieux chercher? (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22940/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Noaschetta (inférieur) Partie inférieure faite à 4 en 3h20.Croisé un local, nous a signifié une énorme crue il y a 1 mois.Résultats : la passerelle a disparu!! 1 relais mal en point sur une cascade. Et le relais de la C18 (juste avant la C55 de la fin) a complètement disparu! Nous avons dû laisser la corde de la cascade precedente (C25) en rappelant du relais de la C55 finale.Pour les prochains penser au perfo! (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22940/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Noaschetta (inférieur) La crue de cet été à tout endommagé Les relais sont abîmés et tiennent de manière aléatoireLes cordes se coincent On a descendu souvent sur monopoint Le relais de la C60 avait disparu Obligés de remettre deux points au tamponoire dans le granit, 1h de perdue Je déconseille vivement la descente de l'amont et aval, à moins de venir avec perfo pour réequiper serieusement (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22940/observations.html)

Granite, which we were later told is not really granite, makes this canyon unique. This smooth rock like this makes it the canyo. More aesthetic than the valley, also quite technical especially a waterfall just before the final 60 in a narrow corridor under flow. Nice canyon! (machine translated)

I write this review to recall a beautiful descent that is no longer feasible today (2025) after a catastrophic flood, it was really a beautiful canyon. Can it be retooled? (machine translated)
