Summary: (machine translated)
A short alpine rappel canyon with a water intake at the top (still under construction at the time of the first ascent); equipped with single hooks except at the "Hohen." A beautiful, high drop of about 160 meters.

Hydrology: (machine translated)
The water intake at the entry was under construction during the first ascent; there is always plenty of water, and there are glaciers in the watershed.

Access: (machine translated)
From Innsbruck to the Stubai Valley, on to Neustift, then on to Gasteig; shortly after that, right by the stream, take the road up to the parking lot

Approach: (machine translated)
From the parking lot, head back toward Gasteig. Follow the path along the upper edge of town until you reach the fork; take the trail to the right up to the Mischbach Alm. Where the trail crosses the stream, enter the stream.

Tour: (machine translated)
First, a streambed with boulders leading up to the intake and tributary. The first anchor is drilled there. 12-meter rappel. Then many downclimbs, and a few short rappels. Before the cliff face ends, rappel 20 meters on dry rock. Then 45 meters to the first belay station in the water on the left, followed by another 30 meters in the water to the next belay station on the left. Then 85 meters in the water to the bottom. After that, there are 4 more rappels, mostly in the water, up to 20 meters.

Return: (machine translated)
5 minutes to the car, up the hill on the right
