Summary: (machine translated)
Short but beautifully washed out and varied gorge with many slides. Commercially often visited.

Hydrology:

Access: (machine translated)
At the traffic circle between Imer and Mezzano, leave the SS50 in the direction of Val Noana and follow the narrow road to Rifugio Fonteghi. Large parking lot.

Approach: (machine translated)
The gorge begins right at the Rifugio.

Tour: (machine translated)
Downclimb the first 2-meter step, then slide down 6 meters or jump 4 meters from the right. The next 4-meter step can be slid down after checking it (pitons on the left and right). After a short swimming passage, there is a steep 5-meter step that can be slid down (a small but deep pool). The next step is bypassed on the left using a fixed rope. From here on, the previously colorful layered limestone gives way to solid, light-colored limestone—beautiful washouts with many pools and small slides. The gorge exits with a 10-meter rappel down a chain to the left of a 6-meter jump into a large pool above a rock bridge.
Here, the stream plunges into a final gorge and then over a >30-meter step into Lago de Val Noana, a reservoir. You can exit the gorge on the left via a fixed rope or rappel 10 meters from one of the fixed rope anchors and then rappel another 18 meters into a deep pool. From the edge of the last waterfall, a mini via ferrata with a wire rope and iron clamps leads upward along the partially overhanging wall.

Return: (machine translated)
Follow the clear climbing tracks on the left bank back to the parking lot.

Simple canyon with various diving possibilities, I found it a bit full of boulders; also walked the last 2 rappels, the highest will be 15 m?, nice view of the lake from the last big vertical (forbidden). Climb from the ferrata on the left (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Neva Équipement divers et varié, variant du monopoint au relai chainé normé. La sortie se fait RG sous la passerelle terminale, juste avant le grand rappel du lac, sur une via ferrata confortable et bien équipée. Un sentier RG remonte en 10min au parking de départ. Niveau d'eau très bas. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/23730/observations.html)
