Summary: (machine translated)
Technically challenging, beautiful, aquatic canyon with crystal-clear water and deep pools; many possible jumps; several rope traverses allow you to avoid dangerous spots, but problematic at high water levels.

Hydrology:

Access: (machine translated)
From Biasca go through the village of Iragna --> continue towards Lodrino --> in the village of Rodaglio turn right at the little church and go up the mountain road until the first bend --> here turn right --> follow the road until the village of "Citt" (bend in the serpentine) --> parking is before or after the bend in the serpentine (do not park in the bend; only for locals).

Approach: (machine translated)
By car the access is shortened to 20min --> from the parking lot you go back to the serpentine curve and continue the slightly sloping path through the mountain village "Citt" --> at the signpost continue to the left in the direction of Pön --> after a few minutes there is another fork --> here right down to the stone bridge --> entry at about 730Hm. If you do not have a shuttle car, you can take the footpath from the village of Iragna, which leads up to the entry in about 1.5 hours.

Tour: (machine translated)
The Iragna superiore is one of the most beautiful canyons in Ticino --> the upper part can be well combined with the intermedio --> the water level should be checked before the very aquatic canyon, absolutely --> below the bridge is r the first and highest abseil (36m) which leads directly in the water course, into the breathtaking scenic landscape --> technically demanding rappels alternate with jumps and short walking passages --> a rope traverse is often needed to safely reach the exposed belay stations (there are plenty of pitons for this purpose)--> most of the jumps require a good jumping technique and control of the water depth in the pools --> the current should not be underestimated --> at the trickiest points, it is usually possible to rappel outside of the water flow --> if you only want to walk the Iragna superiore, look for the exit at approx. 510Hm left the exit over the slope (open canyon section before the next rock face and downclimb) --> in most cases, however, the Iragna intermedio is done at the same time (short part) --> if you also decide for a part or the whole Iragna inferiore, time and equipment should be considered!

Return: (machine translated)
At the exit of the "superiore" at 510Hm li the exit over the embankment (open gorge section before the next rock face and downclimb) onto the hiking trail. Follow this into the valley.

Water level is on the low side for Iragna. Completely drained; superiore, middle, and inferiore sections. A bit slippery in the superiore section. Still fun, though. (machine translated)

Everything's fine. There are a few groups in the middle and at the bottom. (machine translated)

Completed the entire route. Despite the rain two days earlier, the water level wasn't high, and the rock was still slippery. (machine translated)

Very nice and everything is in order. Many of the single anchors could be doubled for added safety. (machine translated)

A few loose slings. Cool canyon—it took us 4:45h total for all 3 parts, just the two of us using 1 rope. Some of the jumps were technical or very high ◫ (machine translated)

Made from a single piece. Very little water, but beautiful... Slipperier than Lodrino. (machine translated)

All sections are in good condition; the water is warm and not particularly slippery. (machine translated)

Our CE4Y 75m got stuck in the C20 before the C27 and we left the rope there. If anyone retrieves it, please let me know

Very nice, a little slippery. Avoided the penultimate slide due to the water current. (machine translated)

Everything was super... the one or other impact anchor is loose... But everything goes without a hitch (machine translated)

This canyon just needs another 50,000 years, and it'll be five stars. Numerous tantalising slides that just didn't quite seem worth it today - so close to being okay, but worth the risk? For someone, for sure!!! The anchoring in here is pretty random. There are a lot for singles, that should be doubles... I'm surprised they aren't given the quality of the canyon, and the location. It is slippery. You only need a 60m rope.
