Transport:	**Rock type:**	**Drainage area:** km²
Season: January - December	**Orientation:**	**Best Time:**
Rating: ☆ 0 ()	**Info:** ★ 0 ()	**Belay:** ★ 0 ()

Specialities:

Gear:

Summary: (machine translated)
O barranco de la Acuasta is a little known ravine, quite slippery, simple but with long rappels and without too much water.

Hydrology:

Access: (machine translated)
On the N260 from Sabiñánigo to Biescas. We will continue straight on towards France on the A136 and at the height of pk 1 we cross the stream of the ravine. We can park here or 300m further on in a lay-by on the right. With the access car we return towards Biescas and after 400m we take the detour to the right to Aso de Sobremonte. We will pass the curves, in the third sharp left turn we will have a track in front of us, we get in and park where we can.

Approach: (machine translated)
We will follow the track to the bridge over the ravine.

Tour: (machine translated)
It is an unfrequented descent but as it does not usually have large avenues the anchors should be in good condition. It is a slippery ravine with water and in summer it dries out.

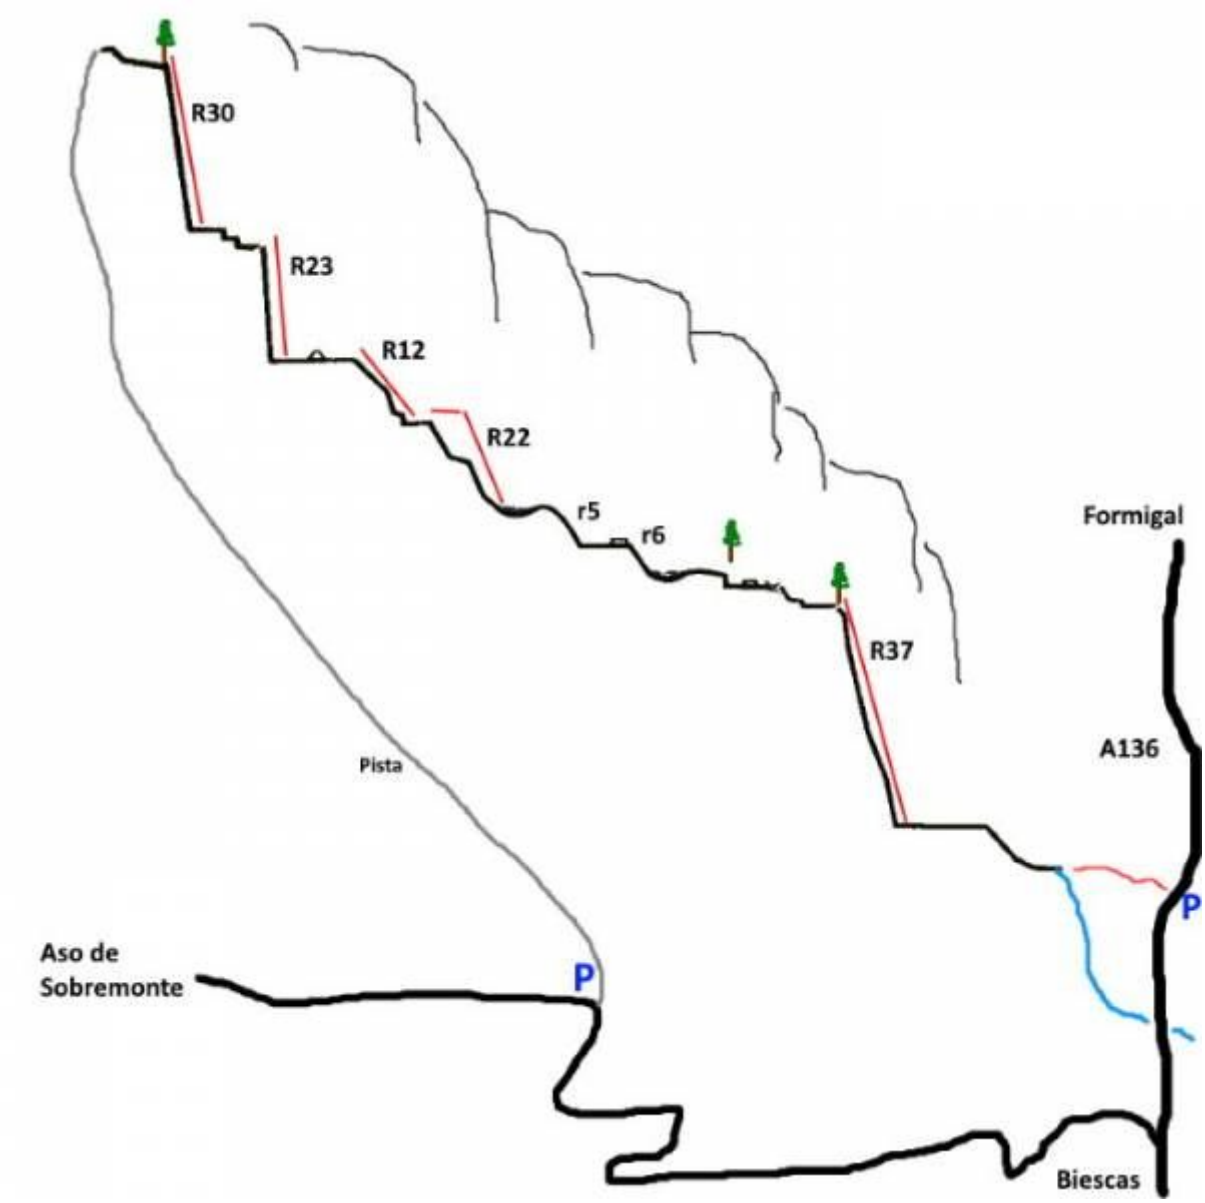

Return: (machine translated)
After the last rappel (37m) we can continue along the riverbed to the road (there is a small path on the left). There is also the option of leaving the riverbed and through the meadows on the left to go down to the second siding.

Coordinates:
Canyon Start 42.6389 -0.3254
