Did the canyon after all canyons are too high due to snow melt. We got in at the first bridge, the new anchors are good but the old anchors are really bad. Need an replacement!! At the final drop the lowest anchor of two can spin so NOT good! So would be best if all old anchors are replaced. For the rest good trip and nice canyons if the rest is too high!

There is still a lot of wood in the upper part up to the bridge. 1 new piton placed at a ramp. After the bridge, 1 new anchor has also been placed at a ramp. You can now also rappel to the small pool before the 2nd last rappel. New anchors drilled at the 2nd last belay. All belays are now in good condition. (machine translated)

A lot of wood. Not interesting from the access bridge to the middle bridge. More of a river walk with downclimbs. After the middle bridge nice rappels with the final rappel into the lake. With a 75 meter rope you can get through tiptop. The canyon is in need of renovation. Old stands and sometimes no stands at all, but easy to improvise. Still very easy to walk through If anyone has the time and inclination, I would be happy to help with the renovation. (machine translated)
