<b>Hydrology:</b> (machine translated) Little water, but the full body suit is highly recommended in spring, usually dry in the summer months.		
<b>Access:</b> (machine translated) From Nice, take the RD-6202 (ex RN-202) to Plan du Var, at the end of the town after the bridge, turn right onto the D-2565, which runs alongside the river Vésubie. Continue in the direction of Saint Jean la Rivière to join the D-19 which leads to Duranus. Drive up to the hamlet of Calençon (second bridge) and park in the parking lot on the left before the hamlet. Start path (marked) shortly after crossing the hamlet.		
<b>Approach:</b> (machine translated) Take the PR path with the signs for Collet Boiera up to Collet des granges abandonnés (approx. 30 minutes). There you leave the PR via a small path to the right, which leads to the watercourse after 3 minutes. Note on finding the small path: At the last hairpin bend on the left, there is a ruin on your right, continue along the path and ten meters further on you will come across another ruin (again on your right). The small path turns off to the right just before this second ruin (large pile of stones).		
<b>Tour:</b> (machine translated) This little-visited walk offers a wild setting in a valley that remains quite open overall. Numerous waterfalls (mostly calcified, the rock clings very strongly) that can be climbed down via de-escalation or rappel, with a very nice C38 in the first third. There are several diversions along the entire route, particularly at the water catchments that lead to the hamlet of Calençon on one side or the other.  Quite open many emergency exits.  For a nice, full descent, you must continue with the lower part after depositing the large ropes at the car.		
<b>Return:</b> (machine translated) When you arrive under the bridge, stay on the bank and ascend on the right bank via the access path of the lower part of the valley.

Automatisch importiert von Descente-Canyon.com für Canyon Imberguet (amont) On s'est garées au parking intermédiaire à côté du pont de la D19. On est montées ensuite en 30min en haut de l'amont. Equipement ok. Pas mal de marche sur la partie haute. On a mis 2h pour l'amont et 2h pour l'aval, en prenant carrément le temps. A la fin de la partie aval, on est sorties par l'itinéraire classique topo (passerelle etc) puis on est remontées à pieds jusqu'au parking intermédiaire. Prévoir une frontale pour le tunnel pour signaler sa présence c'est étroit et les voitures sont pressées ! On a essayé de faire du stop pour éviter cette zone mais on devait trop puer l vase, personne ne voulait de nous ! On a dû mettre 45-50min (on avait pris un change dans le bidon pour pas remonter en combi). (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/21255/observations.html>)
