Specialities:		

Gear:
Ropes: 2x40m, 1x20m

Summary: (machine translated)
Worthwhile short and narrow canyon; very watery (be sure to check the water level!!!); most of the rappels are in the water course; loud noise level; little light; many slippery spots.

Hydrology:

Access: (machine translated)
From Torbole drive to Riva del Garda. Here take the bypass north (ri. Brescia). Turn right into Via Ardaro. 1Km through the village of San Giacomo. At the small church and bridge you will find a small parking (110Hm) (if you have no parking here you can park about 100m in town).

Approach: (machine translated)
From the parking lot up past the yellow big house (asphalt road with driving ban) you come to a small bridge, here you can take a look into the stream --> then it goes up on the stepped hiking trail (Deva, Foci, Maddalena) --> over a fixed rope and attached ladder you come to a red hiking marker and lattice mast --> here it actually goes left. However, if you go straight, you can check the actual water level at the exit of the canyons --> after checking, go back and continue up the trail. After the stone slabs and with trail markers it becomes flatter. The path leads into the forest and to the stream (entry). Here on the left comes a small tributary with a bridge into the stream.

Tour: (machine translated)
Before starting the tour, you should always carefully check the weather and water level, as the canyon becomes very dangerous when the water is high. At the start of the tour, there is a short walking passage with small steps that can be bypassed or rappelled down. After a short distance, the canyon narrows. This is where the first hazardous section begins (a rappelling point with a backflow into the pool in the middle). With a bit of skill, you can rappel right past the pool. Behind the edge below the belay station, there is an option to set up a belay station. (Possibly set up a belay system for the last person.) The gorge is narrow and dark as you continue to the next two small rappelling points and a climbing and walking passage (though artificial light is not necessary). This is followed by several rappelling points ranging from 10 to 20 meters, some of which are within the water flow. After the final 20-meter step, the route continues over several boulders into open terrain. Shortly thereafter, you'll reach a small trail (exit).

Be careful at the fourth rappelling point, which resembles a slide and must be descended using a rope, as there is a risk of injury to feet and ankles (rock blades on the left side).

Return: (machine translated)
Even before the inflow from the left, the trail goes out of the canyons on the right. Follow the path that shortly meets the access path. Then continue back to the parking lot.

Coordinates:
Canyon Start 45.8969 10.8259
Parking Entry and Exit 45.8952 10.8354
Canyon End 45.8955 10.8294
Parking lot Alternative access 45.8967 10.8353

A short, beautiful canyon with only 14 rappelling sections. The water level in this canyon was on the low side; apparently, it rarely gets any lower. Still, the water made a great rushing sound. However, the water level wasn’t challenging enough for a real workout. The anchors are quite old but still in good condition. In the lower section, the route is set up so that you can rappel along the water or sideways on dry ground. It was very slippery at the start. In the dark section, there was significantly less algae, so it was hardly slippery at all. (machine translated)

A beautiful canyon in Riva—it's really worth the trip; actually, it's a must-see if you're at the lake. The last rappel in particular is really cool. (machine translated)

What a beautiful stream. The anchors are getting a bit old, but they’re still in good shape. In some places, there’s only one bolt. The water level was 0.06, and there were no backflows, etc. For me, it’s one of the best streams in this area. The last three rappels can also be done “dry.” We chose the wet ones. Super cool... Beautiful stream Be careful on the fourth descent, which is like a toboggan run; it must be descended using a rope because there is a risk of injury to the feet and ankles (rock blades on the left). Photo (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Albola Superbe découverte en cette journée caniculaire que ce torrente Albola ou une eau bien fraîche et un débit des plus sympathique nous attendais...Équipement plat fois pléthorique quelque peu « rouillé » mais qui fait le job...On a pu envoyer quelques sauts après vérifications d’usage ainsi qu’un magnifique toboggan...La note de 2,8/3 me semble quelque peu « sévère » car on trouve dans cette descente tout ce qu’un canyoneur exigeant recherche dans l’activité...Une note de 3/4 ne serait pas volée...
