Summary: (machine translated)
If you love high rappels, this is the place for you. It’s a nearly 50-meter drop in one go down into Jungle’s End. Otherwise, it’s a fairly short canyon that makes sense to combine with the Kobelache (Kangaroo Jump).

Hydrology: (machine translated)
The Müselbach flows into the Kobelache, so the Enz water level can also serve as an indicator of the water volume. However, the Müselbach has a much smaller watershed.

Access: (machine translated)
Freeway exit Dornbirn Süd and then continue in the direction of Gütle. It is best to leave a bike (or second car) at the inn in Gütle and continue by car in the direction of Ebnit. Cross the Rappenlochschlucht gorge over a bridge and after another 650m a road branches off to the left uphill. Follow this road until you reach a saddle where you can park.

Approach: (machine translated)
Follow the road for about 80m until a forest road branches off to the left, which you follow for about 2km until you reach a bridge.

Tour: (machine translated)
After crossing the bridge, you can already see the first rappelling hook and enter the stream on the orographic right bank. Several more short rappels follow, then the tall final waterfall. The belay point is centered and clearly above the edge, secured with a steel snap hook. This beautiful rappel, hanging freely for about 30 meters, is completed in a single descent. You first follow the stream and can then take a narrow path to the left through the forest. After about 300 m, you reach an old bridge pier where you descend back into the stream. After another 50 m, a ladder (2026) and climbing tracks are visible on the right, leading to a trail.

Return: (machine translated)
Follow the trail for 250 meters until you reach a fork in the path. If you take the left fork, you’ll arrive at the Kobelache (Kanguru Jump). If you’d like to end the tour here, follow the other path, which later turns into a road leading back to Gütle. Those in the best shape can now cycle up Vorarlberg’s steepest public road and pick up their car from the parking lot. (About 30 minutes, depending on your motivation.)

The first three rappelling points can be downclimbed. The stream is currently very slippery. The last belay station is accessible only via a rope belay. Precise measurements revealed a current height of 48 meters due to a rockfall. To ensure a smooth descent, 2x60 meters should be more than enough. The return route is currently heavily overgrown with thorns. (machine translated)

All anchors are in great shape, though some could certainly be improved to support a chain anchor (machine translated)

All stands in order. Shortly before the entry there was a landslide that hit the canyon at the exit of the long rappel, but did not cause any problems. one fixed rope is a bit worn, otherwise everything is fine. Very slippery in places. (machine translated)

Inspection at 0.3m² water level (Enz). Access and return route description was fine, but topographic view and route description rather outdated. New topographic view will follow. Otherwise very beautiful canyon, which was actually more appealing than expected. All stands were very easy to reach. Attention at the last rappel C60. Here you already have to rappel on the 10m raised ledge, as there is no further belay at the bottom of the edge. (machine translated)
