Season: June - October

Orientation:

Best Time: 9-16 o clock

Rating: ★ 0 ()

Info: ★ 0 ()

Belay: ★ 0 ()

Specialities:

Gear:

Ropes: 2x50m

Summary: (machine translated)

Rappel canyon with slides and jumps with crystal clear water and pools. Rappels are partly in the water. Many places can be jumped. 2 large slides where there are no hooks should be checked beforehand.

Hydrology: (machine translated)

There is no power plant or water drainage

Access: (machine translated)

Verzasca Valley: Pass the famous Roman bridge in Laverezze until you reach a large parking lot on the left. You can park there all day. Please make sure that you buy the 10 Fr. day ticket at the parking machine. 3 hours cost 5 Fr. It is checked there and a parking ticket costs 40 Fr. Payment is possible with francs or EC card.

Approach: (machine translated)

Walk back to Laverezze and take the first road on the left uphill, over a bridge and on to the mountain village. At the first stone wall in the left-hand bend after the bridge, you can walk up the meadow to the left and pass a house. It feels like you are on private property here. Continue along the path/steps until you come to a handful of houses where there is a drinking fountain. From there, continue up the path/steps into the forest. From here there are hiking markings. In the forest, follow the canyon upwards until you reach a suspension bridge. Cross this and you have a great view of the pools. You can get off at this bridge later. It may be advisable to lay a short rope in the slope. The slope looks slippery and steep. The 2nd ascent in the forest follows. At some point you reach the height of the river. This is also the entry point. There is supposed to be an upper part. But I have no information about that.

Tour: (machine translated)

The first slide comes relatively at the beginning. There is no hook there. You should check the pool before the slides. It would be an advantage to place a new piton there. In the case of a rappel, the piton is under a large boulder in the watercourse. The first person should be secured there with a man belay and a rope traverse should be built. However, there should also be an abseiling point behind the boulder that is outside the water. Here, too, it would be useful to have a hook in front of the abseiling point to build a rope traverse. When you get back to the suspension bridge at the bottom, you can get off to the left. If you continue, you should have checked the water level in the village beforehand. The water inflow from the Real Agro is difficult to see because of the large boulders. Everything that follows is very watery with long swimming spots. This is followed by great jumping pools with 30-40m swimming sections. This part takes about 1.5 hours.

Return: (machine translated)

Either get off at the suspension bridge or continue until you reach the village. Exit on the left in each case.
