Specialities:		
Gear: Ropes: 2x 40m (2x30m)		
Summary: (machine translated) Beautiful remote lime canyon with clean, cold water; large catchment area (Rio Alba and Tralba); downclimbs mostly in the watercourse; several jumps possible; Tralba is a li tributary of the Rio Alba, so also note the amount of water from Rio Alba; longer walking and downclimb in the lower part of the canyon; in the Rio Alba still 2x15m rappel + 1.5h walking and downclimb to the parking lot / exit.		
Hydrology:		
Access: Von Tolmezzo auf der SS512 ri. Carnia --> weiter auf der SS13 ri. Tarvisio --> bei Moggio Udinese li. abbiegen --> in die Ortschaft(Beschilderung Ovedasso folgen) --> über eine Brücke geht die Landstraße neben dem Fluss "Fella" bis zu einer lang gezogenen li. Kurve --> vor der Brücke des Rio Alba parkt man li. das Überstellungsfahrzeug (ca. 330Hm) --> mit dem 2. Auto fährt man zurück in die Ortschaft Moggio Udinese --> von dort fährt man weiter in die nächste Ortschaft Pradis (477Hm) --> weiter geht es auf einer Asphaltierten Bergstraße ri. "Casera Vualt" --> in einer scharfen li. Kurve bei einer Holztafel re. parken --> hier befindet sich auch ein stark abfallende Forststraße (ca. 730Hm.)		
Approach: (machine translated) From the parking lot at the signpost, follow the forest road to the fork. Here you continue on the left until you reach the reservoir in about 15 minutes. Arrived at the reservoir with the emerald green water, look for an inconspicuous path on the orographic left side (about 10m before the dam wall), which you follow into the forest. After a few meters of altitude, the path flattens out. White/blue markings serve for orientation, whereby the further course from the path is well recognizable. Attention. The path is partly very exposed and leads in about 1 hour over several ditches and a small bridge to the dam wall or entry of the Tralba Inferiore. Entrance altitude approx. 700Hm.		
Tour: (machine translated) Arrived at the dam wall should first be checked the amount of water before you dare the first approx. 12m jump into the cold water (rappel also possible). The next place is then rappelled. Continuously and aquatic it goes on. Several jumps, slides and abseils alternate before you reach the impressive double abseil. Here, at the latest, you feel the power of the water. During the upcoming 25m rappel, you can also rappel 20m and jump 5m from an edge that is not visible from above. The second 30m rappel follows immediately afterwards, whereby the right hand side is very exposed. After the very aquatic double rappel comes the less aquatic part of the tour. One climbs about 20min. over boulders, before one comes to the next dry rappelling point. After that follows another 20 minute downclimb and walking section before you come to the last rappel and the Rio Alba (Attention: The penultimate rappel is again directly in the watercourse and should not be underestimated!).		

Return: (machine translated)

The exit of the canyon is located where the Tralba meets the Rio Alba at about 550Hm. From here you follow the Rio Alba for about 1.5h, in which there are 2x15m rappels and a few jumps before you reach the parking exit/shuttle car at about altitude.

Reports:

2025-05-31 | Ba | ★★★★★ | 📖★ | 🪚★★★★ | 🌊 Normal | 🍏 Completed

All stands in top condition. Water quantity normal to slightly high. Entry jump works, the others mostly too after checking. At rappel 5 there is a tree in the rappel, the rope remained hanging but it was possible to free it. It took us 6:45h between cars with 2 very very small breaks and the break at the entry to get dressed. Many long, tiring downclimbs but the beautiful part fully compensates for this. (machine translated)

2024-12-29 | Wolfgang | ★★★★★👉 | 📖 | 🪚★★★★ | 🌊 Low | 🍏 Completed

Slippery "well" at the top; but all jumps possible, even in the lower part (Alba) everything is suitable for jumping. Nice as always (machine translated)

2024-09-21 | Thomas Fras | ★★★★★ | 📖★★★★ | 🪚★★★★ | 🌊 Normal | 🍏 Completed

At the access the small old wooden footbridges are already slowly decaying, all stands are top, currently many jumps possible (also in the Alba), as always very rewarding (machine translated)

2024-08-29 | Jason Walker | ★★★★★ | 📖★★ | 🪚★★★★ | 🌊 Low | 🍏 Completed

High end of low water level. High water would be quite exciting in there if it was also slippery, but the canyon is bolted quite well. A generous 60m rope will do you in here ☐ The dam is currently full of sand/rock, so no real danger of them opening it up on you. Stacks and stacks of jumps possible in there - possibly the most jumpy canyon around ☐ The abseils are also quite nice, albeit slippery. The walk-out was not so bad - if you're good at rock hopping it doesn't take long at all, the whole tour (with a shuttle driver) only took me 3 hours and 15 minutes, jumping lots of the pitches! One of the best canyons around this region ☐

Automatisch importiert von Descente-Canyon.com für Canyon Tralba Tutto ok, molti tuffi fattibili (anche i 3-4 nell'Alba). Nella calata da 25 prima della 30 i due doppi resinati separati meritano un armo ancora più esposto 2-3 metri sopra agli attuali armi così si evita di stare nel flusso. Il flusso di ieri non era problematico, ma in Primavera potrebbe creare problemi. Il recupero della corda potrebbe dare problemi con gli armi attuali. Meglio usare il terrazzo ampio in riva sx per recupero corda+tuffo da 7-8 metri. Scorcio fantastico da questo terrazzino. Automatisch importiert von Descente-Canyon.com für Canyon Tralba Belle descente plutôt sauvage. Très belles cascades. Pas mal de marche. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/22030/observations.html>)

2024-06-22 | Georg Rudelstorfer | ★★★★★ | 📖★★ | 🪚★★ | 🌊 High | 🍏 Completed

Be careful on the access, the wooden bridges are partly broken through and the path is very exposed for the most part. The Tralba is currently extremely slippery and there is a lot of wood in the tour (partly also directly in the abseiling points), which cost us a relatively long time. The protection is adequate even when the water level is high. For us, the key point was the first 30m waterfall in the double cascade (SOS 8), as there was no visual contact and it was very impressive when the water level was high. Definitely a rewarding and beautiful day trip in crystal-clear water. (machine translated)

2024-02-03 | Horst Lambauer | ★★★★★ | 📖★★★★ | 🪚★★★★ | 🌊 Normal | 🍏 Completed

All the stands are tip top after the floods in the fall. In the Tralba, everything you want to jump was jumpable. Apparently the fall floods have "dug up" the Alba more. At the moment it is not possible to jump in the lower part of the Alba (after you come into the Alba from the Tralba) because everything is full of gravel. (machine translated)

2023-07-22 | Horst Lambauer | ★★★★★ | 📖★★★★ | 🪚★★★★ | 🌊 Normal | 🍏 Completed

A few trees by the storm the week just before the mouth of the Alba but no problem. All stands tip top (machine
