Country: Italia / Italy **Region:** Piemonte **Subregion:** Verbano-Cusio-Ossola **Town:** Baceno		
Difficulty: difficult	**Grading:** v5 a2 III	**Total time:** 4h25
Approachtime: 45min	**Tourtime:** 3h30	**Returntime:** 10min
Altitude entry: 1280m	**Altitude exit:** 850m	**Delta Altitude:** 430m
Canyon length: 600m	**Highest rapell:** 50m	**Amount rapells:** 12
Transport: Car required	**Rock type:**	**Drainage area:** km²
Season:	**Orientation:**	**Best Time:**
Rating: ☆ 4 (1)	**Info:** ★ 2 (1)	**Belay:** ★ 1 (1)

Specialities:
Dam,

Gear:
Ropes: 2x 50m

Summary: (machine translated)
Impressive vertical canyon. Not playful.

Hydrology: (machine translated)
If water is drained from the dam above, a siren sounds beforehand to warn you - get out of the stream IMMEDIATELY!

Access:

Approach: (machine translated)
Continue along the road until a path branches off to the right towards "Alpe Costa". Once you reach the huts, continue slightly uphill on the trail. As soon as the streambed becomes accessible, leave the trail and descend to the water.
The first anchor is somewhat hidden in the vegetation.

Tour:

Return: (machine translated)
At the foot of the large waterfall over the "Devero" - can be difficult when the water level is high - climb up through the forest until you find a less visible trail back to the car.

Coordinates:
Canyon Start 46.2858 8.2991
Canyon End 46.2814 8.2942
Parking at Exit 46.2804 8.2946
Parking at Entry 46.2922 8.2786

Automatisch importiert von Descente-Canyon.com für Canyon Agaro On a fait la via ferrata qui remonte au dessus du canyon et il vaut mieux l'éviter avec un sac de canyon parce qu'avec de nombreux devers. L'équipement semble neuf dans le canyon en tous cas dans la partie basse. La marche d'approche depuis le village doit piquer un peu (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22826/observations.html)

The shuttle service and approach trail are very easy; at the trailhead there are open areas that can accommodate up to 3 cars. From there, the trail is flat until you reach a cluster of houses; then there is a brief climb of about 80 meters in elevation gain to the start of the stream, a trail on your right, with the start on the left side of the stream. After a few 30-meter rappels, you reach the first 55-meter vertical section, with two single anchors connected by a sling. Starting just outside the small ledge or using a bypass would reduce rope abrasion. All anchors are fairly hidden and not intuitive—look carefully! Another series of rappels of about 20–30 m leads to the beautiful final waterfall; it’s entirely in the sun and out of the flow, so choose your ropes carefully. Note: the anchors on the left bank are new and form a single pitch of about 90 m. The anchors on the right bank, on the other hand, are spaced about 45 m apart; retrieval isn’t very convenient because you have to pass through some small trees and rappel onto a ledge (paracord or empty kitbul required). The last rappel is not recommended by locals—the anchors are very far back and there’s a risk of rope abrasion. You rappel from a single point on the left bank onto the small terrace and from there descend via the via ferrata; alternatively, on the right bank, you can make your way through the woods, cross the Devero River (watch the water level), and easily reach the cars. In the photo: perfect water level, checkpoint (machine translated)
