Specialities:

Gear:

Summary: (machine translated)
It is an area of abseiling maneuvers on a girdle next to the Bco Sarah and in it we find among others the Canal de la Piula. 23 possible channels to descend with different heights up to 60-63m.

Hydrology:

Access: (machine translated)
We will have to be located in Àger to which we will arrive by the C12.
We have two options, to park in the Hermitage of Pertusa or in the Castell de Sant Llorenç (the track can be complicated with cars because they skid):
Pertusa option:
One kilometer from Àger towards Balaguer we have the detour to the right to Corçà (7kms) and we will continue towards Mont-Rebei by the Pertusa until the parking.
Option Castell de Sant Llorenç:
From Àger we will go north towards the Observatory of the Universe, we will pass it and climb a pass, here the road turns east overlooking the area of Àger, soon we will turn north again and at the next sharp right turn we will have a track on the left with a sign indicating Castell. We will get in here (be careful, the track does not have to be in good condition for cars, in general it is passable but after rains worsens). We will park next to the Mas.

Approach: (machine translated)
From Pertusa:
We start by the path of the ferrata and the GR, we will see the detour of the ferrata to the right and we will go along the GR until we reach the foot of the cliffs. When the uphill zigzags begin we will see a marked path to the right that leaves us in the girdle. We will go along the strip to the rappel we want to do.
From Castell de Sant Llorenç:
We will go towards the Bco de Sarah, we will pass it and the next channel we will see the Bco Piula where we can descend to the girdle quickly.

Tour: (machine translated)
According to the route to be made, see sketch

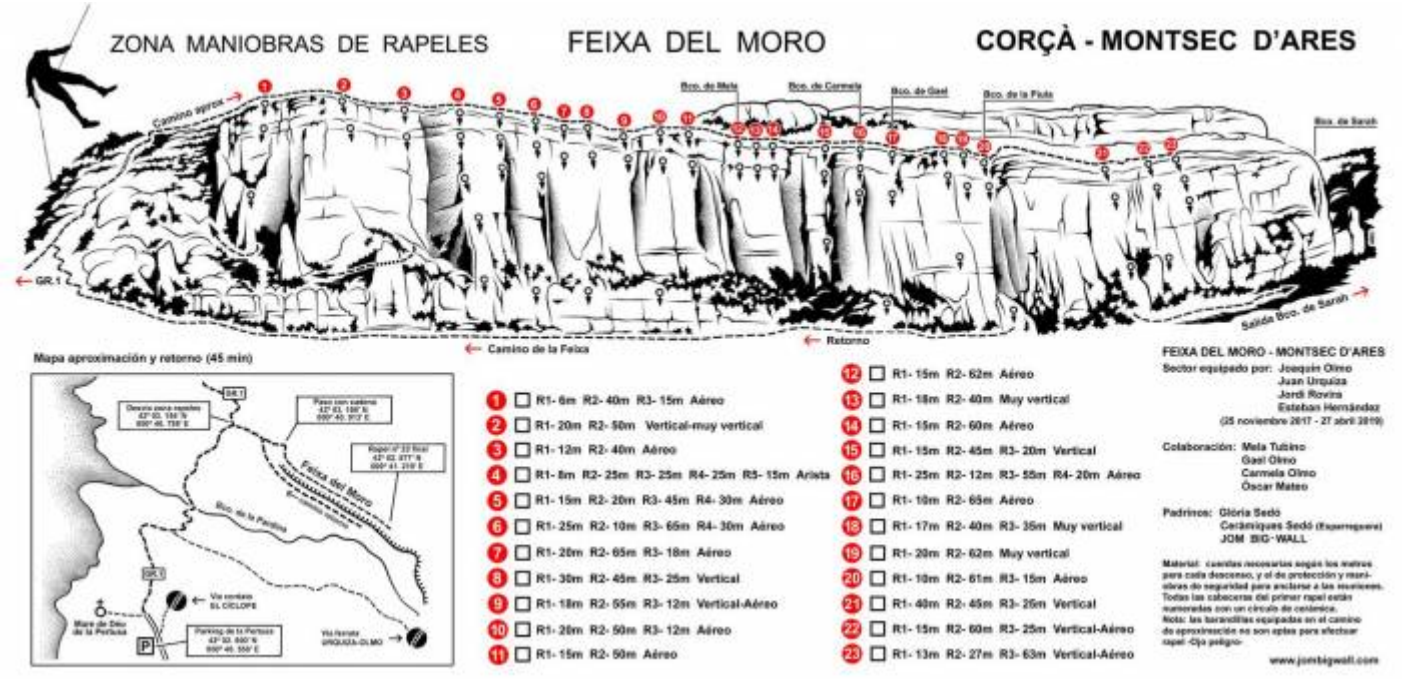

Return: (machine translated)
At the base of the girdle there is a path along the girdle that takes us to the GR to climb back up or return to the car.
