Tour: (machine translated)
The Torno is the more interesting of the two streams, as it has two beautiful gorge sections, the first upstream of the road bridge, where there are also fun passages, and one below, with walls almost 100 meters high. Little gradient with very few abseils.
The Trenico is an almost 2 km long, aqua trekking route between low rock walls with long pools where you can swim and make numerous jumps from the banks.
The route is dry in summer and is therefore recommended in the rainy season when the water level is good.
