Summary: (machine translated) Vertical rappel canyon the Intermedio part are two rappel C70 and C115.		
Hydrology:		
Access: (machine translated) From Locarno --> to Biasca --> (from the distance you can already see the waterfalls) --> in Biasca you drive ri. center --> to get over the tracks you have to drive r. over the bridge and r. the road to the waterfall.en.		
Approach: (machine translated) From the parking lot (last waterfall) is directly opposite the old station building an overgrown path in the forest --> here comes a small wooden bridge and steps with iron railing --> has found the way it goes only up to the bridge --> at the bridge water level control --> at the stone bridge over the creek and take hiking trail right --> now it continues steeply up and you can already see the 50m and 60m waterfall --> the entry for the lower part (Start 2) is below the 115m waterfall. Here it goes left down to the creek. Entry at about 600Hm.		
Tour: (machine translated) If who is looking for a very vertical demanding canyon is exactly right here --> in this canyon you should rappel well mastered --> just as well should be weather and water optimal --> you can start the canyon after the 115m rappel or at the very top --> to go gently on the ropes always give enough rope (partly very sharp edges) --> basically you have in the whole canyon a breathtaking view --> to enjoy this you have to bring a little courage --> caution is in the lower part (after the stone bridge) --> rockfall danger by rope retrieval or bathers.		
Return: (machine translated) Exit directly after the last rappel.

High water at the moment. Only the anchor of the first c70 was hard to reach, because you need to cross the flow. After that all quite easy. The lower part was nice and sunny.

Automatisch importiert von Descente-Canyon.com für Canyon Froda (Intermédiaire) DC-. Mais c'est parfait pour ses grande longueur. Un peu des algues sur les 3 dernières cascades. C'était parfait avec les risques d'orage il y a pleins d'échapatoire. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/22709/observations.html>)
