Canyon length: 1500m	**Highest rapell:** 53m	**Amount rapells:** 18
Transport:	**Rock type:**	**Drainage area:** km²
Season: March - August	**Orientation:**	**Best Time:**
Rating: ☆ 0 ()	**Info:** ★ 0 ()	**Belay:** ★ 0 ()

Specialities:

Gear:

Summary: (machine translated)
Typical alpine canyon, open, difficult to access, with somewhat precarious facilities... Recently opened in 2019, it is a great canyon to discover in late spring or early summer. Before it can be dangerous due to spring thaws. Although everywhere it is described as two parts separated by the Fresser channel, given the difficulty of accessing or leaving from that point, it is advisable to do it completely.
Possibly unequipped and forbidden...

Hydrology:

Access: (machine translated)
By the N260 to Ribes de Freser and there take the detour to Queralbs.
If we have two cars and we want to save 10 minutes of walking, we can leave the second car in the central Daió. From Queralbs we will take the rack railway to go up to Nuria.

Approach: (machine translated)
Along the Camí de Enginyers, we will pass the refuge of Pedrisses, we will pass the torrent of Grill and soon the trail enters the next basin which is ours.

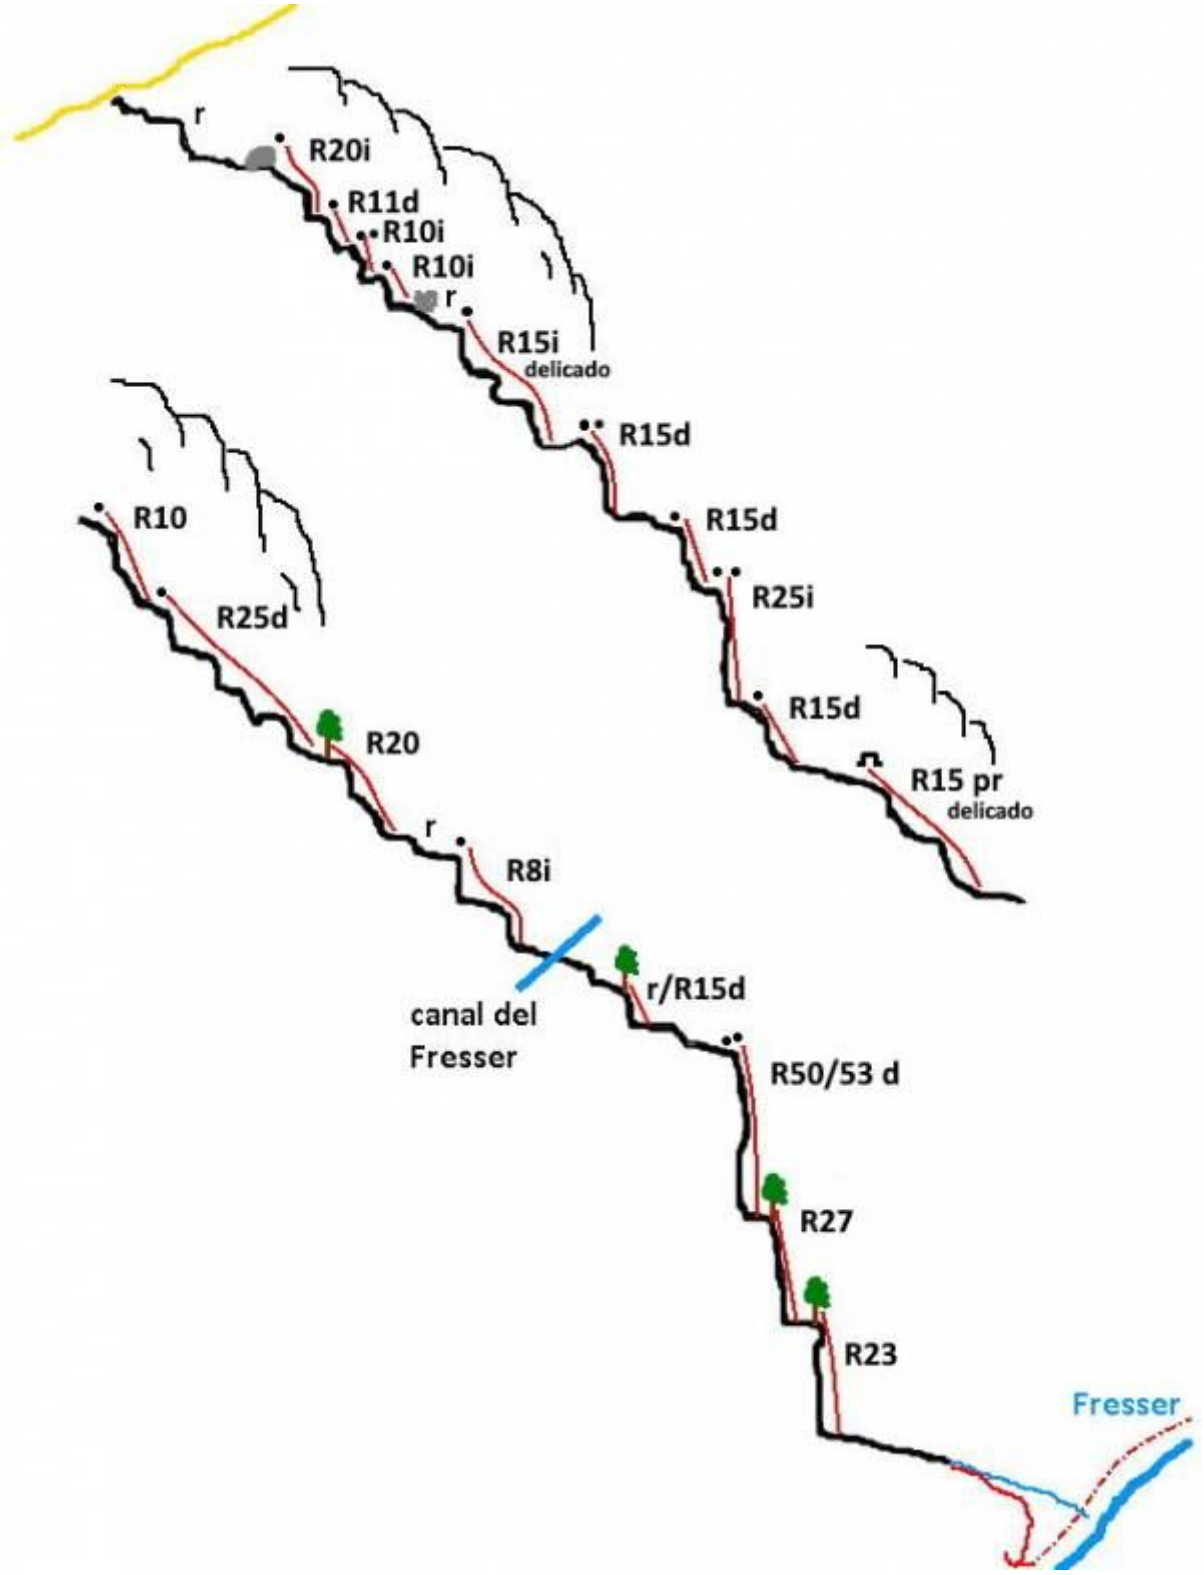

Tour: (machine translated)
Alpine torrent, vertical, with a lot of loose block and somewhat precarious facilities.

Return: (machine translated)
After the last rappel and before reaching the river Fresser, we will find a path that is the same return of the Fresser to the hydroelectric plant. If we have not left the car here, we will walk to Queralbs.

Coordinates:
Canyon Start 42.3975 2.1536
Canyon End 42.3527 2.1671
Unknown 42.3974 2.1537
Unknown 42.3848 2.1859
Unknown 42.3845 2.1857
