Country: España / Spain Region: Islas Baleares / Balearic Islands Subregion: Islas Baleares / Balearic Islands Town: Lloseta		
Difficulty: not as difficult	Grading: v3 a2 II	Total time: 4h15
Approachtime: 15min	Tourtime: 3h	Returtime: 1h
Altitude entry: 740m	Altitude exit: 520m	Delta Altitude: 220m
Canyon length: 1100m	Highest rapell: 20m	Amount rapells: 9
Transport: on Foot	Rock type: limestone	Drainage area: km ²
Season:	Orientation: Southeast	Best Time:
Rating: ★ 2.7 (5)	Info: ★ 3 (1)	Belay: ★ 2.3 (3)
Specialities: § Regulated, Dam,		
Gear: Ropes: 2x20m Headlamp,		
Summary: (machine translated) Simple canyon with beautiful tuff steps. Only interesting with sufficient water flow. Nice way back along a water pipe through several tunnels (headlamp).		
Hydrology:		
Access: (machine translated) From Soller, head towards Lluc, after the tunnel at the top of the pass, drive past a military base to the Cubér reservoir. There is a large parking lot for hikers here. It is also possible to approach from the valley in the direction of Lloseta: https://www.wikiloc.com/canyoneering-trails/torrent-dalmadra-10446958 See also Refugi Tossals parking lot.		
Approach: (machine translated) Follow the road along the shore of the reservoir until you reach the dam wall. From here, follow the hiking trail towards the Almadra valley as far as the tunnel entrance - before the tunnel, descend to the right into the streambed, which you reach before a waterfall step. See also https://www.wikiloc.com/canyoneering-trails/descens-torrent-dalmadra-13138445 If you join the trail from below, take the described way back.		
Tour: (machine translated) The first waterfall is one of the most beautiful - 8m high and decorated with bizarre tufa formations. The waterfall is followed by a longer walking passages until the canyon narrows again and becomes steeper. Drops of up to 20m, with possible jumps of up to 8m when the pools are full. Exit at the 'Font des Pi' spring (open area with forest and clear climbing tracks to the right). It is also possible to descend further to the point where the stream crosses the GR221 (390m alt.). See https://www.wikiloc.com/canyoneering-trails/descens-torrent-dalmadra-13138445		
Return: (machine translated) Turn right to the route of a water pipeline that leads back to the dam wall through several tunnels, which is a real sweat-inducing experience. If you descend to the GR221 and the car is at the top of the reservoir, follow the GR221 to the right, then after a few hundred meters take the path on the right uphill in serpentines. In the extension you then have the way back described above.

Reports:

2026-03-29 | Joey CIA | ★★☆☆ | 📖 | 📍 | ⚓ | ⚓ | 🌊 Normal | 🟢 Completed

The mountain peaks are white and quite windy, but the water level is perfect. Anchors all ok. Partly a few trees and branches, but not really disturbing you can get through superiore. A great canyon at low water levels. (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Almedra Mostly dry, Just the Pool below theSalt de sa Figuereta is still deep and jumpable (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2848/observations.html>)

2026-02-24 | Rok | ★★☆☆ | 📖 | ⚓ | ⚓ | 🌊 Dry | 🟢 Completed

Everything ok, except for the lack of water. Still nice though. One high jump was possible. Rest for rappel. Way back a bit tough. (machine translated)
