Country: España / Spain **Region:** Aragón **Subregion:** Huesca **Town:** Santa Eulalia la Mayor		
Difficulty: very difficult	**Grading:** v6 a3 I	**Total time:** 6h15
Approachtime: 1h30	**Tourtime:** 4h	**Returntime:** 45min
Altitude entry: 1050m	**Altitude exit:** 700m	**Delta Altitude:** 350m
Canyon length: 600m	**Highest rapell:** 215m	**Amount rapells:** 16
Transport:	**Rock type:**	**Drainage area:** km²
Season: September - May	**Orientation:**	**Best Time:**
Rating: ☆ 4 (2)	**Info:** ★ 1 (1)	**Belay:** ★ 3 (1)

Specialities:

Gear:

Summary: (machine translated)
Also known as Huerto Mayor. Technical, demanding, long, and very comprehensive—except for the lack of water. It's probably the most difficult route in the area. When properly set up, it consists of three sections: a first section with ledges, a second, more technical section with a 170-meter vertical drop broken up into sections, and a third section with numerous ledges until it joins the Barranco de Isarre.
In summer, it is not recommended due to the heat and the difficulty of the descent
11/17/2024:
This November, the Aragonese Speleological Federation has re-equipped and inspected the facilities of one of the most legendary and technical descents in the Sierra de Guara: the Lazas Ravine, also known as Huerto Mayor. After detecting that some of the facilities were in poor condition, instructors from the Aragonese Caving School—which is part of the federation—have proceeded to equip and secure both the 200-meter vertical drop and the rest of the ravine. While always adhering to the guidelines and criteria for route development, they have replaced the anchors with stainless-steel ones and removed all those that were in poor condition. The length of the ropes required for this descent has not been changed.
Closed between December and June due to nesting
For highly experienced climbers only

Hydrology:

Access: (machine translated)
Access to the Lazas, O Ciego and O Ciego Sur banks.
We must be located in Vadiello near Santa Eulalia la Mayor.
For it by the N240 direction Lleida we will go to Loporzano. From here to Sasa de Abadiado by the HU330 and here we continue to Castilsabás and we will continue almost to the reservoir of Vadiello, in the closed curve to the right we have place to park on the left in the parking lot of the via ferrata del Palomo.

Approach: (machine translated)
Access to the Lazas, O Ciego and O Ciego Sur bcos.
By the return path of the ferrata we begin to climb leaving the return to one side and getting into the hill of the mallos. We will continue along the grassy channel of the cliff until we reach a small climb where there is usually a rope to help, we will reach the top. We will continue along a more or less marked path passing under the Mallo de San Jorge where we will leave the access to the channels of O Ciego to one side and soon we will be able to go to the left to the ravine where we see more feasible.

Tour: (machine translated)
Dry canyon with 3 very clear parts, the first one with projections, the second one with the vertical of 170m and the third one to go down to the Isarre canyon.
The descent of this canyon is especially aesthetic from the beginning. The large central vertical requires technique and precision: it combines a diverter, a pair of pendulums that add dynamism and rope recoveries that require extra strength due to the inevitable friction on the rock.
The new installation is very well resolved and, at the same time, respectful of the history of the site: next to the current anchors you can still distinguish the old ones.
Note that the pools are not avoidable. Many of them can be avoided with a little skill, but some are really complicated.

Return: (machine translated)
When we reach the end, we will be at the Isarre riverbank, which we can descend or take the path that runs parallel to the stream to go down to the parking lot.

Coordinates:
Canyon Start 42.2479 -0.2940
Canyon End 42.2414 -0.2932
Unknown Parking 42.2384 -0.2858
