Country: Österreich / Austria **Region:** Tirol **Subregion:** Bezirk Reutte **Town:** Haldensee		
Difficulty: not as difficult	**Grading:** v3 a2 II	**Total time:** 3h10
Approachtime: 35min	**Tourtime:** 2h30	**Returntime:** 5min
Altitude entry: 1325m	**Altitude exit:** 1158m	**Delta Altitude:** 167m
Canyon length: 1200m	**Highest rapell:** 27m	**Amount rapells:** 12
Transport: on Foot	**Rock type:** limestone	**Drainage area:** 6.05km²
Season: April - October	**Orientation:** North	**Best Time:** 10-15 o'clock
Rating: ☆ 3.7 (17)	**Info:** ★ 2.5 (15)	**Belay:** ★ 2.6 (15)

Specialities:

Gear:
Ropes: 2x30m

Summary: (machine translated)
varied - jumps, slides, rappel, climbing through tree stumps. Partly it looks wilder than it is. Pools often only very shallow!

Hydrology: (machine translated)
Rocky watershed; can be unpleasant during thunderstorms. Water levels can be checked at the bridge and at the weir.

Access: (machine translated)
Directly to the Haldensee. Choose the parking lot for Tauscher's Alm or Naturcamping at Haldensee as your destination.

Approach: (machine translated)
From the parking lot, cross the bridge and then turn right to follow the trail. You can check the water level at the slide brake or shortly after that at the small bridge. Then continue uphill along the steep hiking trail on the orographic right side, then follow the forest road until it crosses the Strindenbach at a bridge.

Tour: (machine translated)
The first third up to the A27 is relatively open, with small opportunities for sliding or making a possible jump into mostly shallow pools. The canyon then becomes more deeply incised and, after the 27-meter rappel, offers very nice steps with mostly shallow pools. However, there are some large log jams here that require caution. When the water level is high, deflection points can be used as rope traverses at critical spots to avoid the water. The anchors here are drilled quite high and may be harder to reach from below. However, all the higher anchors are now equipped with fixed ropes to make climbing up easier, making them very accessible.

At the exit, the stream surprises you once again with a slightly narrower gulch that offers a few nice slides.

Return: (machine translated)
After the brick slide brake (last rappel directly on the concrete on the left), continue a few meters further until you can easily exit to the right onto the access path at a water extraction point on the left bank.

Coordinates:
Canyon Start 47.4800 10.5595
Canyon End 47.4893 10.5643
Parking Entry and Exit 47.4897 10.5666

Everything looks fine so far. There's a lot of wood in some places. (machine translated)

2026-08-12 | Ralf Breitenstein | ☆ ☆ ☆ | 🕮 ★ | ⚓ ★ ★ ★ | ≈ Low | 👍 Completed
Low water level (see photo), but all the slides are doable if you take it slow. The last jump before the bridge was also possible. Nothing out of the ordinary along the way. (machine translated)

2026-07-05 | Kris Klein | ☆ ☆ ☆ ☆ | 🕮 ★ | ⚓ ★ | ≈ Low | 👍 Completed
Slides and a small jump (under the bridge at the end, where you can set up the rope traverse) are doable. New dead chamois in the upper section (oro li), but out of the water. Fixed ropes are also in good shape. Edge protection is advisable for some of the rappels. (machine translated)

Everything's fine so far, but it's very slippery to walk on. There are a few slides and small jumps you can do. It's a cool canyon for the area. Near the very bottom, there are two new small trees lying in a pool; a few people could probably remove them. If there were more water, they'd probably be a nuisance. (machine translated)

A little wooded. Lots of slides. Beautiful scenic views. A 30-minute walk at a leisurely pace. (machine translated)

We hiked the Strindenbach today when the water level was rather low. The ascent takes 35 minutes at a leisurely pace (not including a 5-minute break). It was a beautiful canyon right from the start. We had perfect, bright sunshine starting at 10:30 a.m. Since we had plenty of time, we checked out all the pools. All the slides were accessible. Two pools were 2.50–3 meters deep and suitable for jumping into. Even a 4-meter jump was no problem. Contrary to another review here, all the anchors were easily reachable for people 1.65m or taller. Climbing up was possible using a fixed rope. Toward the end, you just had to find the anchor in the center of the rock face; there was no need to reach the old anchor. The canyon is generally more than adequately secured. There are far more anchors and rappelling points than you need, since many sections could be traversed or downclimbed diagonally with ease. All in all, including breaks and everything else, it took us exactly 5 hours. We jumped and slid down several times in some sections and made full use of the stream. If you’re the same way, you might want to buy a longer parking ticket or park via the app. (machine translated)

Everything is in good shape. Some of the fixed ropes are new. There’s quite a bit of wood in some spots, but it’s all manageable. Some of the slides are doable. The jump hasn’t been tested. Beautiful canyon! Photo of the wall at the end, the high rappel, and the jump. (machine translated)

Anchors ok. Water level low. Some slides and a small jump possible. (machine translated)

Surprisingly good for lime, many slides and a small jump possible. I drilled three more anchors in the lower part. (machine translated)

Anchorages and ropes are all in good condition. Today there was a little more water than "normal", but it still went very well. The pools were all covered in gravel (mostly only knee-deep), no jumps possible. Slides were no problem everywhere. Towards the exit there were a lot of branches in the stream, which also had to be bypassed in a more complicated way. Two anchors were in an awkward position, no idea how you would normally get there □□ A little improvisation helped All-round beautiful canyon at the start of the season (machine translated)

The slide in front of the big rappel is now doable again, the tree trunk in the pool could be removed and a fixed rope is still hanging. (machine translated)

2025-08-05 | Ralf Breitenstein | ☆ ☆ ☆ ☆ | 🕮 ★ ★ | ⚓ ★ ★ ★ | ≈ Normal | 👍 Completed
Everything in order, upper pool, formerly accessible by jump, now blocked by two trees and completely covered with gravel. However, fixed ropes have already been installed. Photo shows the water level from the bridge.
