Specialities:
Dam (autom. flushing),

Gear:
Ropes: 2x 50m

Summary: (machine translated)
Deep but wide canyon with lots of water and two waterfalls, heavily used for commercial purposes

Hydrology: (machine translated)
Large water intake above the entry for the Kraljevac power plant

Access: (machine translated)
New information after exploration in winter 2025/26:
The entry point used for commercial tours is located north of Zadvarje. Google Maps: "Canyoning Zadvarje - Start point" Shortly before the end of the village turn left into Ul. Mala Mlinica and follow the road to the exit, parking lot at a power plant building.

Approach: (machine translated)
New information after exploration in winter 2025/26:
Follow the hiking trail for 2 minutes to a control hut, from there a well-secured path down to the water (approx. 15 min.)

Tour: (machine translated)
New information after exploration in winter 2025/26:
You cannot enter the canyon from the bottom (as indicated on descente Canyon), at least not completely. At the entry there is a hut with signs that you need a permit from the "Lake and Karst" Institute to enter the canyon, whether this only applies to commercial or private tours is not known to me.

Commitment
Strong. There is no escape.

Time period/ water character
Be careful, the flow speed is always enormous. Take a professional with you if you want to walk it without risk. There are no abseiling points in the waterfalls. Everything can be bypassed through tunnels. However, you can take advantage of some of the pools. You can also climb back up from the bottom!

Return: (machine translated)
Return on the outward journey.
