País: Schweiz / Switzerland Región: Kanton Graubünden Subregione: Region Surselva Ciudad: Pigniu		
Dificultad: difícil	Grado: v5 a5 V	Tiempo total: 7h35
Tiempo acceso: 1h15	Tiempo tour: 6h	Tiempo regreso: 20min
Altitud de entrada: 2330m	Altitud de salida: 1450m	Altitude delta: 880m
Longitud del cañón: 2500m	Rapel más alto: 55m	Cantidad rapells: 40
Transporte: Coche obligatorio	Tipo de roca: limestone	Zona de entrada: 10.00km ²
Temporada: octubre - noviembre	Orientación: Sureste	Mejor época: 8-14 Horas
Clasificación: ★ 4.5 (1)	Información: ★ 2 (1)	Belay: ★ 3 (1)
Especialidades: Glaciar en zona de captación,		
Equipo: Cuerdas: 2x 60m		
Resumen: (traducción alternativa) Long tour with south-facing glacier, often only feasible a few days a year, and then with a fairly sporty water level.		
Hidrología: (traducción alternativa) Glacier that is in the sun from 7 a.m., several teams have already been surprised by strongly rising water levels at 12 noon.		
Acceso: (traducción alternativa) You can buy a 3-day ticket to Alp Sura for 10 francs. There is a QR code for Twint next to the no-driving sign. The road up is not paved and gets quite steep towards the exit. It is best to take a shuttle between there and the parking lot at the reservoir.		
Acceso: (traducción alternativa) Start early! Ideally, start at Alp Sura just as the sun rises (7:00). Follow the hiking trail for an hour, cross Gavirolas, and then another 10 minutes to the start of Fluaz.		
Recorrido: (traducción alternativa) Superiore : Carries about half of the water. If you want to make inferiore, the part should probably already have ice, otherwise there is too much water at the bottom! Attention! As soon as there is sunlight, the rocks on the left and right thaw again and stones fall down, so superiore is not really recommended (do Gavirolas instead, which runs parallel). Inferiore : After the confluence it gets sporty, the gulches are occasionally interrupted by steep emergency exits. The first big rappel "The White Out" (about 50-55m) has very strong water pressure after 40m, but it flies over the last 6-8m. At 2024 you could then stand comfortably behind the beam in the pool below. So it's better to put more rope in the rappel than to make it too short, in the last third (except for the very last 5m) you can hardly see anything.		
Regreso: (traducción alternativa) Along the lake, there are usually hikers who ask you what you are doing with your equipment.		
Coordenadas: Inicio del Cañón 46.8478 9.0734 Final del Cañón 46.8355 9.0958 Aparcamiento a la salida 46.8239 9.1112 Aparcamiento a la entrada 46.8237 9.0956
