Especialidades:

Equipo:

Resumen: (traducción alternativa)
Hiking and swim canyon below the reservoir Lago di Barcis.

Hidrología:

Acceso: (traducción alternativa)
From Udine west on the 464 to Maniago and continue to Montereale on the Cellina (57 km). From here take the 251 towards Barcis (Longarone). Leave a car at the access parking lot of Torr. Alba (coming from Montereale, after the first long tunnel, turn right and then right again under the 251 in a westerly direction. After the underpass turn left above the Torr. Alba parking bay).\nWith the second vehicle 100 m after the second long tunnel (in total the third tunnel) turn left and on a dam over the reservoir Lago di Barcis. Here good parking.

Acceso: (traducción alternativa)
From the parking lot at the reservoir in a westerly direction along the road to the dam wall. If you don't want to go down the closed iron stairs at the dam wall, you go from there in an easterly(!) direction on a path up to the ridge between Cellina and the reservoir. After about 100 m, a small path on the right descends in a wooded cirque and reaches the river after a short traverse to the right and another trackless cirque.

Recorrido: (traducción alternativa)
Alternating walking and swim routes.\nIn case of emergency (dam above!) some exit possibilities to the road are opened.\nThe water is very cold - swim distances up to 100 m.\nOrograph. left. at about half of the route, the old river bed stretches along under huge boulders next to the river (worth seeing!); the beginning is marked by a natural rock arch (rock gate).\nConnection with Torr. Alba/Torrente Molassa possible, cf. there.

Regreso: (traducción alternativa)
After the inflow of the Torr. Alba from the left, descend 100 m. in the Cellina and then go up on the left to the old road along the Cellina. Here turn left and then right onto the road that accompanies Torr. Alba. At the T-junction again to the right and through the tunnel back to the car.\nAlternatively, you can also go up the Torrente Alba, opening an additional alternative return at the confluence Alba/Molassa.

Coordenadas:
Inicio del Cañón 46.1874 12.5760
Final del Cañón 46.1904 12.5932
