País: Italia / Italy Región: Friuli Venezia Giulia Subregión: ente di decentramento regionale di Pordenone Ciudad: San Francesco		
Dificultad: difícil	Grado: v5 a1 II	Tiempo total: 3h10
Tiempo acceso: 50min	Tiempo tour: 2h	Tiempo regreso: 20min
Altitud de entrada: 720m	Altitud de salida: 450m	Altitude delta: 270m
Longitud del cañón: 450m	Rapel más alto: 55m	Cantidad rapells: 7
Transporte: A pie	Tipo de roca: limestone	Zona de entrada: 3.20km ²
Temporada: enero - diciembre	Orientación: Sureste	Mejor época: 9-15 Horas
Clasificación: ★ 2.5 (1)	Información: ★ 3 (1)	Belay: ★ 1 (1)
Especialidades:		
Equipo: Cuerdas: 2x 60m		
Resumen: (traducción alternativa) Lower part of the Rio Spisul Short, sunny rappel canyon; 100m waterfall divided into 3 sections, probably no water in summer, therefore ideal in spring or after rainfall		
Hidrología:		
Acceso: (traducción alternativa) Either via the north through Tolmezzo following the SP1 over the mountain pass (winding, narrow) to San Francesco; or via the south through Cornino also following the SP1 up through the Arzino valley		
Acceso: (traducción alternativa) From the parking lot, cross the bridge and turn left. First possibility via the forest path up to the right. Follow the forest path to the first sharp 180° hairpin bend - follow an inconspicuous path into the forest on the right. Follow the path, ignoring a fork to the left, until you come to the river => here you can check the water level. Cross the river and from here follow a very dilapidated path up to the left (partly hardly recognizable, only later clearly again at the top) as soon as it flattens out clearly, the path returns towards Rio Spisul to continue along the river further back. Here descend pathless (approx. 30m) to the stream. ca 50min		
Recorrido: (traducción alternativa) The stands are from the first ascent - they are safe but minimalist. Please make your own precise assessment. The stream begins immediately with a small abseil step (approx. 5m, one bolt, right) diagonal rappel - can probably be climbed, but is slippery! This is immediately followed by a 15m rappel, centered behind boulders. After about 10m you can possibly slide or jump => be sure to check the pool, it is not deep! Then you can rappel left on a tree => but you have to climb around on the right. On the right is a stand from which you can descend diagonally to the first stand of the high waterfall (approx. 15m). You have to climb a bit strangely over a rock to the right to the belay. First high rappel: approx. 55m, to the right. Pay attention to the edge below the belay => rope protectors. It is better to set up a redirect on the tree (I will improve this on the next ascent!) Rope retrieval can also be difficult. Stand in the middle of the high rappel: Little space for people (max. 2). To the right, on a block-shaped ledge. From here you cross the waterfall to the next belaystation about 50m to the left. Be careful when the water level is high, as it is directly in the water jet. Last belay: Left, approx. 40m to the base of the waterfall. Plenty of space and you can stand. From here it is only a simple block hop for 10 minutes to the crossing. Get out there. ca 2h		

Regreso: (traducción alternativa)

From the crossing, return via the same path as for access.
approx. 15min

Coordenadas:
