Cuerdas: 2x 40m (2x30m)

Resumen: (traducción alternativa)
Beautiful remote lime canyon with clean, cold water; large catchment area (Rio Alba and Tralba); downclimbs mostly in the watercourse; several jumps possible; Tralba is a li tributary of the Rio Alba, so also note the amount of water from Rio Alba; longer walking and downclimb in the lower part of the canyon; in the Rio Alba still 2x15m rappel + 1.5h walking and downclimb to the parking lot / exit.

Hidrología:

Acceso: (traducción alternativa)
From Tolmezzo on the SS512 towards Carnia --> continue on the SS13 towards Tarvisio --> turn left at Moggio Udinese --> enter the village (follow signs for Ovedasso) --> cross a bridge and take the country road next to the river "Fella" to a long bend on the left --> park the shuttle car on the left before the bridge over the Rio Alba (approx. 330m) --> take the 2nd car back to the village of Moggio Udinese --> from there continue to the next village of Pradis (477m) --> continue on an asphalted forest road to "Casera Vualt" --> in a sharp left bend park on the right by a wooden board --> here there is also a steeply sloping forest road (approx. 730m)).

Acceso: (traducción alternativa)
From the parking lot at the signpost, follow the forest road to the fork. Here you continue on the left until you reach the reservoir in about 15 minutes. Arrived at the reservoir with the emerald green water, look for an inconspicuous path on the orographic left side (about 10m before the dam wall), which you follow into the forest. After a few meters of altitude, the path flattens out. White/blue markings serve for orientation, whereby the further course from the path is well recognizable. Attention. The path is partly very exposed and leads in about 1 hour over several ditches and a small bridge to the dam wall or entry of the Tralba Inferiore. Entrance altitude approx. 700Hm.

Recorrido: (traducción alternativa)
Arrived at the dam wall should first be checked the amount of water before you dare the first approx. 12m jump into the cold water (rappel also possible). The next place is then rappelled. Continuously and aquatic it goes on. Several jumps, slides and abseils alternate before you reach the impressive double abseil. Here, at the latest, you feel the power of the water. During the upcoming 25m rappel, you can also rappel 20m and jump 5m from an edge that is not visible from above. The second 30m rappel follows immediately afterwards, whereby the right hand side is very exposed. After the very aquatic double rappel comes the less aquatic part of the tour. One climbs about 20min. over boulders, before one comes to the next dry rappelling point. After that follows another 20 minute downclimb and walking section before you come to the last rappel and the Rio Alba (Attention: The penultimate rappel is again directly in the watercourse and should not be underestimated!).

Regreso: (traducción alternativa)
The exit of the canyon is located where the Tralba meets the Rio Alba at about 550Hm. From here you follow the Rio Alba for about 1.5h, in which there are 2x15m rappels and a few jumps before you reach the parking exit/shuttle car at about altitude.

A beautiful canyon; even the middle section with boulders isn't too difficult, and you're then rewarded with the lower section, where there are also plenty of options for jumping. (traducción alternativa)

A beautiful canyon, though with plenty of bouldering. The water level is low, and the anchors are in good condition. (traducción alternativa)

Great canyon, great day, just right water level for our ability. The walk in from the upper parking lot is very nice, in the shade almost all the way, and mostly level, not much elevation. The last wooden bridge is now a bit collapsed, but still usable. Wish the canyon had less climbing over rocks and hiking, that would make it a 5/5 canyon for me.

All ok and to be careful on the penultimate rappel of the Tralba which still has two logs in the middle of the flow. Watch for both descent and rope recovery. Puddles well de-iced in all puddles of the Alba stream. (traducción alternativa)

Completed in 5hours with 7 people from car to car with moderate/fast pace. 1:15h approach 3h canyon 30-40minutes way out The approach is moderately++ exposed. Lots of jump possibilities up to 12-13 meters in very beautiful pools and massive landscape. Also big downclimbing parts which are quite fun, if you like big rocks downclimbing. Nothing too crazy complicated. We expected the way out of the canyon to be longer but it's not that bad if you like downclimbs and rock hopping. I recommend the canyon for people who like jumps and beautiful downclimbs. If you only rappel and are a slow downclimber you have to plan more time. If you jump everything it's just 5-6 rappels. Very nice canyon with a lot of jumps into deep green pools. We were 7 people, took 1:15 hours for the ascent, about 3 hours for the tour, which we didn't rush, and about 20 - 30 minutes back. Soon after the last jumps in the Alba there is a path on the orographic right of the canyon (on the gravel bank) which leads you back to the road very quickly. Anchors all good.

Water level normal, anchors all in order, great upper part! Also in the Alba still super jumps in emerald green pools. Time with 5 people from car to car approx. 6h (traducción alternativa)

Access currently very tick-rich, everything jumpable in the Tralba, time specification from our point of view very crisp, rather calculate more time! Four people, took 8 hours by car. Top Canyon (traducción alternativa)
