Resumen: (traducción alternativa)
This is a very unusual hike because the stream plunges 110 meters into a vertical chasm. Be careful: in the spring, the exit may be blocked by avalanche snow.

In the winter, it is a well-known ice climbing route.

Hidrología: (traducción alternativa)
Very small watershed. You should walk through it after it rains if you want to see it with water.

Acceso: (traducción alternativa)
Park down in the valley. Driving up the road is prohibited, and it’s so steep that even an e-bike would have a hard time making it up.

Acceso: (traducción alternativa)
At about 1,700 meters, you’ll have to leave your e-bike behind. First, follow the alpine road to Voregg, and then take the narrow trail past Hächlere and Giesene Schafberg. The trail is exposed up to that point, but there are just enough footholds that you don’t need to use your hands. Above the Breitwangflue, the route continues off-trail to the entry.

Recorrido: (traducción alternativa)
The start of the route is currently located at the two large boulders in the Trockene chute, directly west of the stream (which was at high risk of falling ice during the first ascent).

That's pretty cool—really unique. I don't know of anything like it in Switzerland. It would make sense to drill into the right crevice above that hole; we didn't go there because there was a lot of falling ice, and the access is tricky with all the snow. (traducción alternativa)
