Resumen: (traducción alternativa)
South-facing rappel canyon with several entry points down into the Vomper Loch. No jumping or slides. Starts almost dry in the upper part (watch out for avalanches) but is recommended in spring.

Hidrología: (traducción alternativa)
Depening on snowmelt/rain, the upper part has more or less (almost no) water. Almost by the exit of the canyon, it receives plenty of water from underground sources, hence is fresh whereas the upper part may feel quite warm and desert-like.

Acceso: (traducción alternativa)
From Schwaz in the Inn Valley to Vomp and in the village near the church head north towards Vomperberg. Keep left at the following junctions in the direction of Gasthaus Karwendelrast. Once here, park your car in a suitable place.
Alternatively, you can also drive to the power station at the exit of the Vomper Loch and park there.

Acceso: (traducción alternativa)
From the Karwendelrast inn (860 m above sea level) on a forest road in a westerly direction for about 1500 m, until a path (no. 224) leads off to the left to the 'Hallangerhaus'. Soon you come to the Haag Bründl (Stub Bach). Pass it on the left and continue westwards on the only slightly ascending path above Vomper Loch. After about 45 min. you reach the Tuwaldbach (shown in AV map as Kühsoachgraben).

Recorrido: (traducción alternativa)
Rappel canyon in beautiful white limestone. No slides or jumps.

Regreso: (traducción alternativa)
Either after about 100 m in Vomper Loch turn left through the beech forest up to the approach path and follow it back to the car.
At the power station (670 m above sea level), turn right over the ladder and down to the left of the water intake (the gate can be opened from the inside). From the partly concreted flat area, a path on the left leads up to Gasthof Karwendelrast (approx. 25 minutes from the water intake).
A car transfer is possible, but hardly worthwhile.

Wonderful Karwendeltour from Vomp. Almost dry in its upper part but recommended for its curvy shapes in compact, white limestone. To our joy we found most drops rebolted straight from the start, with single, generally well-placed glue-in bolts (8mm). The original anchors are still in place, but no longer used (all are missing quicklink). The lower section on the other hand is almost excessively equipped with chains and fixed ropes. We added one Tebylon anchor in the upper part where a hanger was missing (but the rock on this location was bad) otherwise the bolting is fine. With a minimal bolting kit, this canyon should be doable top-to-bottom. As the book says, an ice axe could be interesting early season. Vomper loch currently has more gravel than usual.

All good, 1 anchor missing (fresh debris flow), but enough trees there (traducción alternativa)
