Cuerdas: 2x30m

Resumen: (traducción alternativa)
Beautiful lime canyon with several mostly short abseils, some jumps and slides. When the water level is high, the tour should not be underestimated due to the narrow passages. There are two entry points via the "Ciol della Val" tributary

Hidrología:

Acceso: (traducción alternativa)
From the village of Claut, drive to Lesis. Either park at the first free parking lot (approx. 10 min. walk to P2) or shortly after Lesis cross the Cellina bridge and drive to the large second parking lot (until the third Sunday in Sept. you have to pay €6/car for parking at P2 -> parking machine at P1 with CE card function).

Acceso: (traducción alternativa)
Follow Path 391 over the first bridge and continue straight ahead uphill to an alpine meadow with several houses. Turn left right at the first house (the trail marker and path are hard to see). Then climb steeply, keeping to the left, up to the edge of the forest. Continue on the visible path, which winds steeply uphill in many hairpin bends. After gaining a few meters in elevation, the narrow path—which is very exposed in places—runs parallel to and far above the canyon with minimal elevation changes until you reach the tributary “Ciol della Val.” (Alternatively, after crossing a mostly dry streambed, you can turn left and follow an unmarked trail—this path first leads to the ruins of an old material cable car, then steeply down to the Ciol della Val streambed, which you reach via three rappels before it joins the Ciolesan. This access saves you five rappels from the upper Ciol della Val.)

Recorrido: (traducción alternativa)
To reach the Ciolesan, descend via the open (sunny) tributary "Ciol della Val". Depending on the entry option, there are 8 or 3 (max. 30m) abseils to the confluence with the Ciolesan. The lime canyon is very varied and continuous. From the confluence with the Ciolesan it becomes narrower and more spectacular. Here there are a further 8 abseiling points (max. 15m). The sometimes very narrow (0.5m) and mostly short rappels should not be underestimated, especially at higher water levels. In the lower part of the last narrow passage there is a large clamping block that apparently blocks the way. However, this can usually be bypassed on the left without any major problems. After this, there is a veil shower and a small abseil step before you leave the canyon on the left. In 2023, the entire tour (16 abseiling points) was equipped with Inox chain anchors and wing rings as well as several helpful rope traverses (still in place in 2025!). However, the emergency drill set should always be carried as the canyon can change quickly after a flood. All in all, a worthwhile tour with beautiful mountain scenery (tip: a dinosaur footprint can be visited nearby).

Regreso: (traducción alternativa)
As the streambed opens up, you will see a water line stretched across the canyon. Exit here to the left and follow the water pipe along a clear path that leads back to the parking lot

Today we took the short route from the Material cable car. There's a very helpful fixed rope for the descent down the steep slope to the canyon. Everything went smoothly on the hike. (traducción alternativa)

Everything's fine. There are still fixed ropes in place to reach the belay stations for the two narrow, closely spaced rappels in the lower section. (traducción alternativa)

Automatisch importiert von Descente-Canyon.com für Canyon Ciolesan DC-, Canyon très esthétique, le départ depuis l'affluent porte peu d'intérêt, quand on arrive a la confluence le canyon devient très esthétique avec un bel encaissement et des résurgences un peu de partout (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/21713/observations.html)

In 2025, we professionally re-equipped the entire canyon with Raumer 12 mm resin anchors and double-bolt belays throughout. Or, in a slightly more formal style: In 2025, our team fully re-equipped the canyon with Raumer 12 mm resin anchors and double-bolt belays throughout. (traducción alternativa)

2025-09-20 | Tom (Thomas Fras) | ☆ ☆ ☆ |🕮 ★ ★ ★ |⚓ ★ ★ ★ | 〰 Normal | 👍 Completado
All 16 belays were equipped with 10mm Inox chain anchors or W-ring + several rope traverses, we also liked the upper entry (8 abseils in Ciol della Val). If there is a lot of sediment in the streambed, the water can become cloudy (this was not the case during our ascent). New topographic view under Internes (traducción alternativa)

There are much nicer canyons in the area. We had very cloudy water, which only made many jumps/slides possible after checking it out (traducción alternativa)
