Résumé: (traduction alternative)
A beautiful descent right after heavy rains. Perfect to combine with the Hüttenwistobel if everything else has too much water (Hüttenwistobel in the morning, Schreustobel in the afternoon). Don’t rely on the water level you can see as you exit the canyon. Because of the springs, the canyon only has about 1/5 of the water level you can see from the road. So the best reference would be the Hüttenwistobel: if it already looks almost dry, then the Schreustobel is also almost dry, so it’s better to head to Panärato... (machine translation)

Hydrologie: (traduction alternative)
This is a very karst-like area; the water level you see at the bottom doesn't match that of the canyon, because a large spring feeds into it after the last rappel. In general, the stream dries up much faster than you'd think, so you should tackle it right after it rains.

Accès: (traduction alternative)
You can drive as far as Langwis; then you have to walk the last kilometer to the stream.

Approche: (traduction alternative)
Follow the hiking trail up alongside the canyon, then turn right onto the forest road until you reach an elevation of 1,405 meters. From there, a hunting trail leads directly to the start of the canyon.

Tour: (traduction alternative)
The first part is narrow. After that, it opens up and the rappels become less frequent. Once the side stream joins the main stream, the rappels become more frequent again until you reach the 50-meter-high chamber. Before the last rappel, the stream is joined by additional springs, and after that, you come to the large spring.

Retour: (traduction alternative)
Follow the stream until you reach the road.

A beautiful limestone gorge with nice, grippy rock. All belay stations are in good condition. For the first longer rappel, descend 30 meters over the next step, as there are no pitons there. A little more water than at Hüttenwiestobel. The belay station at the 50-meter mark is intact, orographically speaking, and slightly hidden on the right side of the edge. (traduction alternative)

Had drilled the canyon on 24.09. After a lot of rain the days before we had already set up the Hüttenwistobel because the surrounding canyons had too much water. Some anchors are set so that you can rappel through several places. We also downclimbed several places. A few video impressions of the ascent: https://www.youtube.com/watch?v=gAEoBebckBY (traduction alternative)
