Spécialités:

Matériel:

Résumé: (traduction alternative)
A lovely little, rugged descent where the waterfalls follow one after another without interruption.

Hydrologie: (traduction alternative)
The canyon is in very good condition in the spring and after heavy rains; otherwise, there is very little water flowing.
The pools are not stagnant, but very dark; the flow rate is hardly any lower than that of the Baoussous Falls downstream.
Accurate assessment of the flow rate can be made from the stone bridge at the start of the access path.

Accès:

Approche: (traduction alternative)
At the bridge, you'll see a blue marker; follow it until you reach the start of the canyon.
You must immediately turn right into a rocky, dry tributary.
After a few meters in the tributary, take a steep trail that has already been cleared by hunters on the left side.
Halfway up, do not take the first access point marked with an arrow pointing to the right, as it leads to a hunting blind that goes nowhere.
Follow the steep path to a well-marked intersection, where you should again avoid the second access point on the right, as this is hunting stand No. 2.
Turn left immediately and walk along the top of the canyon.
The trail crosses several more small, dry, vegetation-covered tributaries; then you'll find a path that allows you to descend to the riverbed at the beginning of the canyon.

Tour: (traduction alternative)
A beautiful, short, rugged descent where waterfalls follow one after another without interruption.
You start by rappelling down a handrail attached to a tree in the center of the canyon to reach the first belay station, which leads down into the canyon.
This is followed by a very open slide and a second abseilable handrail before descending the canyon's highest waterfall, which can be navigated either directly or via a detour.
You slide past a beautiful 90-degree bend before reaching a natural rappelling spot that quickly leads to the beautiful Dromedary Waterfall, which plunges into a pool larger than those upstream.
We finish the tour with a slide just a few meters long and a final small vertical rappelling spot that leads into a large pool with very shallow water.

Rn°1: ANMC C10 RD
T4 "monopoint RG"
Rn°2: MC (boulder) C22 RD + intermediate RD monopoint serving as a detour + section that can be descended via a slide.
Rn°3: C14 ANRD
Rn°4: C11 RG
T6 monopoint RG, section that can be descended via a slide.
Rn°5: C8 RD

- Caution: You might think the pools have a great depth, but they are actually very shallow.
- Do not try to jump into the last pool—be careful!
However, there are some very small, cushioned jumps you can try.

Retour: (traduction alternative)
After the last waterfall, simply follow the left bank, cross the river, and head back to reach the stone bridge.

Automatisch importiert von Descente-Canyon.com für Canyon Mas d'en Ribes Tout petit débit, cool mais c'était les derniers jours possibles pour ce canyon, après ça sera croupissant.. Vu un groupe sympa qui sortait de Baoussous apparemment avec un peu plus de débit.Toujours, petit canyon mais esthétique et équipement top, idéal pour former un grand débutant,!!. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/24090/observations.html)
