Cordes: 2x30m

Résumé:
Long alpine stream that rises in the mountains above the hamlet of Vico and flows into the Oglio River on the Edolo plain.
Not commonly used for canyoning, its interest is purely exploratory. The upper section features around 30 rappels within a long valley, while the lower section, located in the woods near the San Sebastiano tunnel, is unfortunately polluted with all kinds of scrap metal and debris.

Hydrologie:

Accès:
From Edolo, follow the road towards Aprica. Shortly after the junction for Vico, park the first vehicle in a small lay-by before the tunnel. On the left is the old road, closed by a barrier but without a padlock.
Drive back with the second vehicle and continue up to Vico, where you park and take the trail behind the church.

Approche:
From behind the church the mostly level path reaches a small iron bridge over the stream in about 10 minutes.
The same point can also be reached from Cortenedolo by following the trail to the right, which remains level and leads to the same bridge.

Tour:
A short distance upstream there is a pool with a handline for climbing out and a waterfall approximately 10m.

C5 - Natural
(bridge of the new road to Aprica and exit at old bridge)

Downstream there are other 3/4 rappels leading to the industrial area plain of Edolo, near the confluence with the Oglio River (in this case, the first vehicle should be left at Ponte Trivia, on Via Oglio).

NOT VERIFIED upper and intermediate part
