At the end of the ravine, return by the path on the right, it is forbidden by the Environment to return along the Guadiela River.

Hydrologie:

Accès: (traduction alternative)
From Cañamares towards Cañizares on the CM210, after the tunnel at km 34 there is a track on the left that leads to Santa Cristina. Follow the track.

Approche: (traduction alternative)
From Santa Cristina we take the ascending track, once we reach the high area, a descent begins where there is an intersection with another track, we must take the track on the right.
We continue descending until we reach a small esplanade where we find the riverbed (before reaching the Tobillas bridge).
We will continue a small little marked path that runs parallel to the riverbed, crossing it several times, until we reach the beginning of the ravine.

Tour: (traduction alternative)
The ravine consists of 6 rappels, after the first 4 the riverbed leads us to a chaos of blocks in which we can enter through the center and exit either by a siphon of 2 meters or through a small window.
Two rappels later we are deposited in the confluence with the Guadiela river, which can present complications if the flow of this one is high.

Retour: (traduction alternative)
You can go along the Guadiela river until you reach a staircase where you have to go out, or parallel to the river on its right bank there is a very little marked path that will avoid going down the riverbed and leads us to the same metal staircase.
From this point continue along the path that will take us to the washhouse of Santa Cristina.
