Pays: Schweiz / Switzerland Région: Kanton Graubünden Sous-région: Region Surselva Ville: Laax		
Difficulté: un peu difficile	Niveau: v4 a2 III	Temps total: 6h45
Temps approche: 1h30	Temps tour: 4h30	Temps de retour: 45min
Altitude d'entrée: 2320m	Altitude de sortie: 1985m	Altitude du delta: 335m
Longueur du canyon: 1700m	Rapelle le plus haut: 46m	Nombre de rapelles:
Transport: à pied	Type de roche:	Zone de prise d'eau: 6.00km ²
Saison: septembre - septembre	Orientation:	Meilleur moment:
Évaluation: ★ 3.8 (2)	Info: ★ 3 (1)	Belay: ★ 2 (1)
Spécialités: Glacier dans le bassin versant,		
Matériel: Cordes: 2x 50m		
Résumé: (traduction alternative) Small-limbed glacial stream, narrow and beautifully cut		
Hydrologie:		
Accès: (traduction alternative) We come from Chur on the A18. At the end of the highway we turn right in the direction of Flims, Laax, Disentis. We drive around Flims in the tunnel and then turn right before the water reservoir to the Laax parking lot at the foot of the mountain railroads.\nfrom here we take the post bus up to Alp Nagens (1970m). Runs Mon - Sun between 8:00 and 17:00 from Laax Bergbahnen to Nagens mountain station 6 times daily. Last descent: Alp Nagens 5.00 pm.		
Approche: (traduction alternative) From the inn we go down again a few meters on the approach road and then turn right (1940m altitude) on a slope that leads us via Alpe Mughels (2000m altitude) to another alp on Sogn Martin. There the exit ends (1985m altitude). We now take a trail that goes up the slope in a northwesterly direction. At about 2110m altitude, we leave the path and keep going in an exactly westerly direction towards "our" stream, which we reach at 2170m altitude. Here it is easy to climb into the creek and we deposit here at least the ropes for the 46m rappel. Until then, a 20m rope is sufficient. Also the backpacks should be packed here and possibly reduced so that the many narrow passages can be mastered without major problems. Thus "relieved" we climb now on the orographic left edge of the canyon upwards. We cross a hiking trail (2230m altitude) and further up we meet a hiking trail that crosses the stream to the left here (2320m altitude). Above the bridge we enter the gravel bed of the stream, where then also immediately begins the gorge.		
Tour: (traduction alternative) We pinch off through narrow chutes, squeeze through rock crevices following the meanders of the stream and crawl under rock arches. Where we meet our rope depot, the descent becomes more attractive, but also more technically demanding. Below the 46m rappel, a series of smaller steps awaits us until the tour ends at the confluence with the Ual Draus.		
Retour: (traduction alternative) We follow the Ual Draus downstream and after a good 20 minutes we come across a path that has just crossed the stream. We go first in the direction of ONO, stay left at a junction and come up to the alp where we reached the exit of the slope during the approach (1985m altitude). From here on the approach path back to the shuttle bus stop Alp Nagens.

Automatisch importiert von Schlucht.ch für Canyon Ual Ault Vorab, Wasserstand: "tief" Verankerungen: "Gut" Sehr schöne "kraxlerei" und Alternative im Herbst, wenn die anderen Schluchten in der Gegend noch zu viel Wasser haben. (Quelle: <https://schlucht.ch/schluchten-der-schweiz-liste/1171-ual-ault-vorab>)

Very nice alternative in early fall, when the water level is too high for other tours in the area. (traduction alternative)
