Pays: France **Région:** Provence-Alpes-Côte-d'Azur / Provence-Alpes-Cote d'Azur **Sous-régione:** Hautes-Alpes **Ville:** Freissinières		
Difficulté: très difficile	**Niveau:** v6 a6 IV	**Temps total:** 7h5
Temps approche: 1h	**Temps tour:** 6h	**Temps de retour:** 5min
Altitude d'entrée: 1760m	**Altitude de sortie:** 1440m	**Altitude du delta:** 320m
Longueur du canyon: 1330m	**Rapelle le plus haut:** 70m	**Nombre de rapelles:** 22
Transport: à pied	**Type de roche:** slate	**Zone de prise d'eau:** 25.00km²
Saison: août - novembre	**Orientation:** Sud-Est	**Meilleur moment:** 10-17 Heures
Évaluation: ☆ 5 (3)	**Info:** ★ 2.5 (2)	**Belay:** ★ 2.3 (4)

Spécialités:

Matériel:
Cordes: 2x 70m

Résumé: (traduction alternative)
A sensational ratio of access and canyoning pleasure.

Hydrologie:

Accès: (traduction alternative)
If you are coming from Gap via the R.N. 94, drive past Guillestre and turn left at the end of Saint-Crépin onto the D38, which leads up to Pallon (start of the Canyon de la Biaysse - Gouffre de Gourfouran). If you are coming from Briançon, turn right before La Roche-de-Rame.
Follow the departmental road 38B and then the D 238 through the Freissinières valley to the parking lot that marks the exit of the road.
Here you will find yourself in the majestic setting of Dormillouse.

Approche: (traduction alternative)
From the parking lot (which is often crowded in high summer), take the path that crosses the Oules de Freissinières and climb up the G.R. on the right bank of the Torrent de Chichin. At one point, leave the forest and "shoot due north" into the boulder field. Continue in this direction and do not return to the south, which leads to the Oules. You will then reach the village of Dormillouse.
At the small wooden bridge, head west again until you reach another small bridge, which is stone and Roman. The tranquillity and beauty of the surroundings should not stop you from getting out your equipment to gear up...

Tour: (traduction alternative)
From the Roman bridge, walk 20 m up the stream to the first sill. A first C3 (spits in R.G.) can be jumped over when you see the block hidden under the foam. If the level allows, you can overcome it with a slide. You then pass under a natural millennial arch and can make a jump from a height of 6 meters. After crossing the Roman bridge, you can use the R.G. to get out. This allows a team member to install a zip line from below if you wish.
The canyon then opens up to a more open area or between the sun with small abseils, slides and medium sized jumps (max. 10 m). Be careful with the numerous jumps, where you have to assess the "landing zone" well... Rappels too close from the water are guaranteed... too far is the knee in the chin...

At the wooden bridge you saw on the ascent, you can take a break and eat by going to the right.
Then you continue with a series of jumps and slides, including the famous "S" slide. Then you come to the most vertical part, where the abseiling sections
This is followed by a fairly long sequence of abseils: C15 + C4 + R7 + C30 + C10 + C40 + C20 + C45... OUF... We have (at the top of this position) 170 m of gas under our feet...
The gear is installed and the only special point of this part is the last 65m abseil, which has to be split. Then one member of the rope team descends to the relay (where there is no room for more than two members) to place the 45m rope for the final rappel.

Commitment
The equipment is very good, the depth of the pools varies from one year to the next.... The slips are before the wooden bridge, then two immediately after on the right. The last two are on the same bank at the top and bottom of the C30.... After that it is ... "atmospheric".

Period/water character
Some years the conditions for a descent will never be there ... This shows how watery this canyon is, which is only very rarely accessible before the exit of August and until the snow arrives.

The history
First ascent by Max Imbert and Henri Vincens.

This route, considered very difficult, offers you the opportunity to navigate canyons in a remarkable alpine scenic setting. At the exit of the FREISSINIERES valley, the Biaysse river flows from the confluence of two torrents that emerge from deep and wild canyons: the Torrent des OULES and the Torrent de CHICHIN. The site at the heart of the PARC NATIONAL des ECRINS is exceptional for its fauna, flora and human environment. Climbing the Torrent de CHICHIN is a serious undertaking reserved for experienced sportsmen. You must be able to assess the risks before embarking on the descent, especially in terms of the speed of the water, as several passages can become traps. If the water spreads across the entire width of the waterfall and forms an almost uninterrupted curtain, the water level is too high. When the cascade splits into clearly separated rivulets, the conditions are most favorable. These conditions are usually present at the exit of the season (end of August, September). Don't forget to stow the equipment in the car.
Once you have stowed the equipment in the car, you can try the excellent raspberry and blueberry tarts in the car at the exit of the parking lot.

DORMILLOUSE, a village inhabited all year round, takes its name from the old French "l'endormie" (the marmot). It is only supplied by helicopter twice a year by the General Council of the Hautes-Alpes. So remember to bring the newspaper or something similar to one of the accommodations ... They will appreciate your gesture...

Retour: (traduction alternative)
At the foot of this very beautiful waterfall, you leave the path to RG on a well-marked path that leads past beautiful wild raspberries.... but "shhhh".

Coordonnées:
Départ du Canyon 44.7396 6.4391
Fin du Canyon 44.7337 6.4471
Départ alternatif du Canyon 44.7366 6.4420

Automatisch importiert von Descente-Canyon.com für Canyon Chichin Comme annoncé tout est engravé. Le siphon au debut a disparu . Le tob en S pareil . Malgré tout on a reussi a faire quelque tob malgré le peu de fond en reception . La grande magnifique. Dommage que la queue de cheval de vienne pas titiller la ligne de rappel avec ce debit ... Automatisch importiert von Descente-Canyon.com für Canyon Chichin Did the integrale. Equipment fine. The canyon is not at its best, filled with gravel and mud, with murky water. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2265/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Chichin RAS, pas un gros débit pour CE canyon, mais ça déroule quand même au pied des cascades. Bcp d'équipements hors crue, avec le soleil on a eu chaud. GD - / DC normal + (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2265/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Chichin Fait à 4 à partir du pont de bois Passage du geyser mythique !Attention la cascade avant le passage du geyser fait beaucoup plus que 20m, une 30aine de mètres, on a utilisé une 65m pour traverser la vasque du geyser et arriver au dernier relais. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2265/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Chichin On a fait que la deuxième partie à partir du pont en bois. GD mais tout se descend hors actif du coup on sent pas grand chose. Aucune difficulté technique pour nous alors qu'on connaissait pas le canyon. On a fait quelques toboggants mais aucun saut. 3h voiture à voiture à 2.Par contre on s'est fait surprendre par la hauteur de la deuxième partir de la dernière cascade. On a utilisé le relais en RG juste à côté du geyser et il faut 2 x 50m de corde ! Le C43 est peut-être depuis un relais RD. Automatisch importiert von Descente-Canyon.com für Canyon Chichin En crue 2 jours avant, GD ce jour, TGD critère dc, parti depuis la passerelle, aucune difficulté pour la partie inférieure, l’équipement est vraiment hors crue. D’après un guide qu’on a croisé, il manque pas mal de points dans la partie amont. Toutes les vasques sont complètement engravées, aucun saut / toboggans possible, syphon du départ bouché, méconnaissable par rapport il y a 2 semaines. Beaucoup moins ludique du coup. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2265/observations.html)
