Spécialités:

Matériel:

Résumé: (traduction alternative)
Vertical canyon with a very aesthetic final rappel, generally we will find it dry after heavy rains. We will have the option to finish in the R45 or do 3 more rappels and exit by the Escabas river but it will force us to wear neoprene. Canyon DISINSTALLED at the request of the environment.

Hydrologie:

Accès: (traduction alternative)
Along the CM210 that goes from Molina de Aragón almost to Cuenca, crossing the Alto Tajo in an area of great ecological value.
From Cañamares to Puente Vadillos, after passing the campsite, just where the road turns left to pass the bridge, we will continue straight ahead to Fuertescusa and Poyatos. We will leave the Cañamares bathing area on the left, continue on and pass the pretty village of Fuertescusa with its ferrata "Asalto al Castillo K2-K4".
Shortly before arriving at Poyatos at the height of the camping the serranía take the road that goes to the right (direction Tragacete), by here we will travel about 10 kms, until passing the Tejadillos Hostel and after 300m we will have the detour to the left to the Recreational Area of the Lagunillos where we will park.
As an alternative option, if we have two cars, with the access car we could continue along the road to the Hosquillo detour, take that little road and park at the end, just above the cuts.

Approche: (traduction alternative)
We cross the river over the bridge and after walking about 500m close to the river, we will take a path that goes to the right in steep ascent, from time to time we will see some pink dots. Almost a kilometer of steep climb we will have a little path, very little marked, on the left that flattening approaches the ravine, already visible. After crossing the ravine, we take another path that runs parallel to the dry riverbed and takes us to the first rappel.
If we have left the car in the Hosquillo, we will take the track that goes to the viewpoint and after 100m, in the right curve, we get into the clearing of the forest that goes down to the riverbed and we will follow it until we find the first ledge. We could take a track above the clearing that, after passing the watercourse of the ravine has a path on the right that is the same as the one that goes up from the lagunillos.

Tour: (traduction alternative)
Only for its R45 it is worth doing, a very aesthetic rappel with incredible views.

Retour: (traduction alternative)
After R45 there is a trail to the left (it is shown in OpenStreetMap) that will lead to the access trail.
