Matériel:

Résumé: (traduction alternative)
Little known canyon, of little entity for having only 2 rappels, but of a great beauty in its environment. It will allow us to make a ferrata, k2, in its return.

Hydrologie:

Accès: (traduction alternative)
In Balaguer, take the C12 towards Ager.
Arriving at Les Avellanes, just at the entrance, we have the detour to the right by the LV9042 to Sta Linya. We will follow this road for 5kms, up to the village, where we will find a sharp turn to the left to take the LV9043, direction Sant Urbà and Montclús. Follow the signs to Montcús.

Approche: (traduction alternative)
From the parking lot, we continue along the track until it ends, just above the reservoir. You can intuit the ravine to our right, we go there for less than 100m until we see a rope on the left, it is the access handrail.

Tour: (traduction alternative)
Only two rappels, with handrails, the second with overhanging pieces.

Retour: (traduction alternative)
When we get over the train tunnel we will go to the left, we will not go down since it takes us to the beach of the reservoir. There are some ropes to be able to go through here a little safer until we pass the tunnel. Here we have a stretch where we walk next to the tracks to the next tunnel, on the right there are some cairns to access the via ferrata.
The via ferrata is a channel, with a somewhat old installation, which takes us to an area with life wire but without clamps. At the top, a small handrail on the left takes us out of the channel.
In the superior part we will find milestones that take us to some ruins and from there to an old track, we follow it in direction West until going to give to the access track, from there to the car.
