Matériel:

Résumé: (traduction alternative)
Also known as Saltadero de Agulo or bco de la Palmita, it is a spectacular ravine, an impressive vertical with water that will not leave us indifferent. Located in the northern part, its exuberance and views will accompany us throughout the descent. We can do it inside the water or outside, in both options we have good facilities but hung that will force us to be extremely careful.
Not suitable for inexperienced people.

Hydrologie:

Accès: (traduction alternative)
Bcos north zone of Gomera
We are located in the north zone, in Agulo.
Access bcos Agulo
The car of return we will leave it in Agulo, in the viewpoint of the Steps or in the towns.
If we have two cars, with the access car we will have to go up to the viewpoint of Abrante.

Approche: (traduction alternative)
Approaches bcos Lepe and Bica
From the lower parking lot we will go up the path that starts at the stairs of the road, it has an indicator marking the ascent to the viewpoint. Just when it flattens at the top and we have the cuts on the left we must leave the path to head to the riverbed, the viewpoint is 600m further.
From the viewpoint we must descend the trail to the same point where we go to the riverbed.

Tour: (traduction alternative)
Impressive vertical in which the installation was re-equipped in 2017, the one that goes on the outside is a little rusty (to take into account).
3 or 4 rappels to save this beautiful waterfall, at the base we will have to walk a little before the last rappel. This one we will find it dense, with a lot of mud and some water.

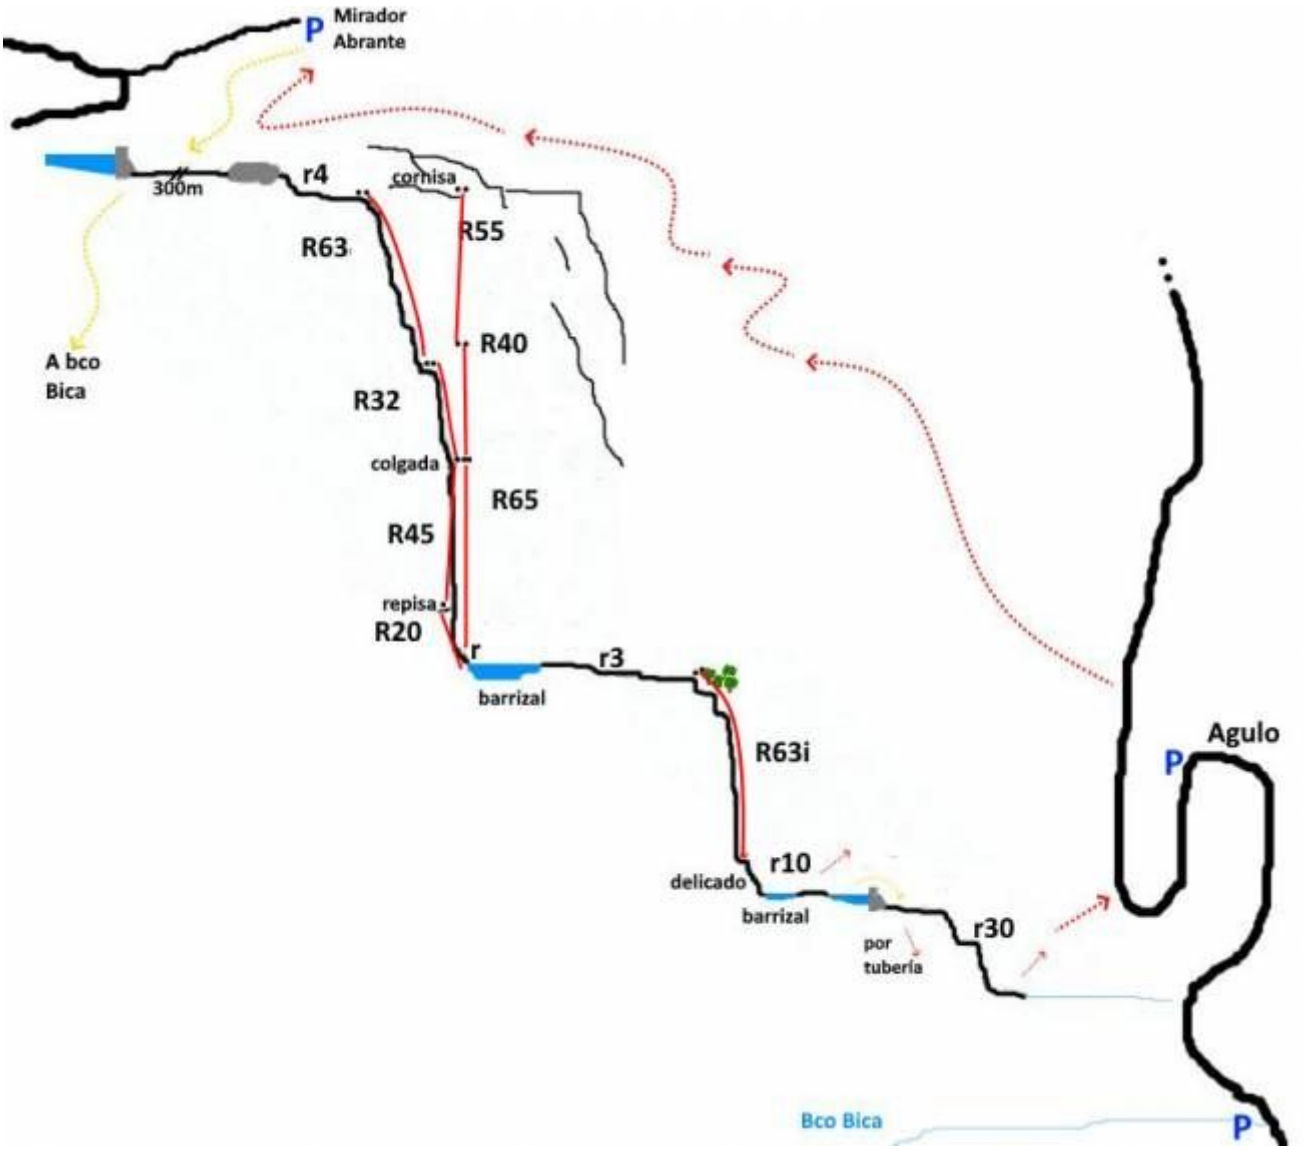

Retour: (traduction alternative)
After the dexterity, we follow the pipe and exit to the left through some pipes.

Coordonnées:
Départ du Canyon 28.1839 -17.1982
