Résumé: (traduction alternative)
The parts are more open than the upper parts, but a siphon can still be blocked from time to time. This part is well suited as a winter canyon.

Hydrologie: (traduction alternative)
Observe online water measurement from flimselectric
Standard values:

< 80l/sec: OK

80l/sec - 200l/sec = average water level

200l/sec - 350l/sec: high water level - dangerous!

> 350l/sec: Acute danger to life!

Emergency shutdowns of the turbine are possible at any time. Operators should also be able to handle significantly more water.

Accès: (traduction alternative)
Take the FlemXpress cable car from Flims to Startgels.

Approche: (traduction alternative)
Summer access: From the Startgels cable car station, take the hiking trail directly along the stream to Punt Desch (several bridges over Flem)
Winter access: From the Startgels cable car station, walk down to the streambed.

Tour: (traduction alternative)
Mostly walking passages, a few rewarding parts, but no comparison to Flem I to III.

Retour: (traduction alternative)
After the last rappel go to Foppa and take the train down or walk.

Currently a borderline amount of snow and ice in the canyon. Challenging winter conditions at the moment. Abalakov technique should work. (traduction alternative)

With 1m of fresh snow, Flem I to III was not possible, so we did Flem IV to V instead. This works well even in snow and ice. (traduction alternative)

Flims-Foppa-Naraus cable car has now been dismantled. The canyon is therefore currently difficult to reach. (traduction alternative)
