Résumé: (traduction alternative)
Pure rappel tour in a forest canyon with many short rappels at low heights.
The highlight is the last rappel with 20m and some special features.

Hydrologie: (traduction alternative)
This is a tour with a relatively low water flow, but with some tributaries, which can possibly lead to a significant rise in water levels if there is a lot of rainfall.

Accès: (traduction alternative)
We drive from Kössen in the direction of Kirchdorf in Tirol. Approx. 100m before the Elfi Alm is the Hasenaueralm parking lot at the edge of the road, where we can park our car free of charge.

Approche: (traduction alternative)
We follow the hiking trail in the direction of Hasenauer Alm until we cross the stream after about 30 minutes.

Tour: (traduction alternative)
This is a rappel tour in a forest canyon with many short rappels with low heights and slippery ground and some dead wood.
The highlight is the last rappel with 20m and an "infinity pool" at the start and a 2m jump at the exit of the rappel.

Retour: (traduction alternative)
After the last rappel, we orographically climb out of the stream to the right and walk across the meadows to the Bäcken-Alm. From there, we follow the forest road to the main road, where we can already see our vehicle on the right-hand side

Anchors are hard to find under the leaves. Some of the rappelling stations with fixed anchor points and Rapidlids attached to trees should be replaced—the ropes are heavily to very heavily worn due to weathering. (traduction alternative)

Everything iO, often rappel from trees necessary. (traduction alternative)

Anchoring strange, once double anchor once thin tree. Superiore canyon in the off-season. 20m rappel very nice! (traduction alternative)

All anchors ok, tour with great water level. New chain anchor at the first high rappel. In the first part of the canyon a lot of dead wood but not very disturbing. (traduction alternative)

Anchors mostly ok. Partly tree slings. Good tour for practicing rappel. (traduction alternative)
