**Spécialités:**

**Matériel:**
Cordes: 2x30m (+Wurfsack)

**Résumé:** (traduction alternative)
Very aquatic, beautiful lime canyon; cold, clean water; several downclimbs and rappels in the water course; large catchment area approx. 10-12Km²; dangerous individual spots (underwashed rock, strong currents, stands in need of improvement); superiore and inferiore possible; several possible jumps.

**Hydrologie:**

**Accès:** (traduction alternative)
From Carnia drive towards Tarvisio --> turn right towards Resiutta --> in the village of Resiutta drive over the bridge --> immediately after the bridge turn right into the Resia valley --> after approx. 3.5 km you will see a gravel parking place on the left, on the right a sand road goes down to the stream --> park here.

**Approche:** (traduction alternative)
From the parking lot, follow the road for about 30 meters in the direction of travel to the gravel descent right to the stream (Torrente Resia). There used to be two wooden bridges over the stream here, but both were torn away in 2023. So wade through the streambed. Keeping slightly to the left in the streambed, head towards the canyon, which is already visible from afar. You will soon reach the bridge that crosses the Rio Nero. From here, on the orographic left, path 703 (signposted "Ric. Casera Rio Nero") leads to the entry point. The path climbs steeply at first and then runs more or less flat alongside the canyon. The last few meters to the stream are descended. You pass another tributary before reaching the wooden bridge/entry to the Rio Nero Inferiore (To reach the Superiore, follow the path (slope) uphill, cross a tributary, then enter the forest. The path initially climbs, where it begins to descend, look out for a small path that leads to the right after crossing a dry chute = entry to the Superiore) (The Superiore is less interesting except for a few individual cells).

**Tour:** (traduction alternative)
approx. 3h
Inferiore:
The Rio Nero inferiore has not been known for so long. However, the canyon has a lot to offer for experienced canyoneers/aquatic fans. From the wooden bridge, you will soon reach the 1st abseiling/jumping point, where you should stay away from the undercut rock. You can also jump here. This is followed by beautiful washouts, short walking sections, jumps and abseiling points in the water. Despite some walking and downclimbs, the canyon remains entertaining right to the end. However, the currents in the pools and the short rappels, some of which are directly in the water, should not be underestimated!

Superiore (1.5h):
The canyon begins impressively and extremely cold with a beautiful incised section consisting of a smaller jump and an aquatic 16m rappel (emergency exit right). This is followed by an entertaining 16m abseil and a 5m jump. After that it becomes less interesting. Walk, downclimbs and jumps follow until the bridge (entry inferior).

**Retour:** (traduction alternative)
At an altitude of approx. 400 m, you leave the flat streambed and take the path left. You will soon reach the signposted junction. Follow the forest road already used for access back to the ford over the Resia and on to the parking lot.

**Coordonnées:**
Départ du Canyon 46.3564 13.2520
Parking à l'entrée et à la sortie 46.3791 13.2598
Fin du Canyon 46.3701 13.2587

Plenty of water. Beautiful and exciting water sections, with great opportunities for jumps. There’s also a lot of strenuous, slippery bouldering. The gear is of mixed quality, but it’s fine. (traduction alternative)

Everything's fine, even after yesterday's rain—not so much, I'd say A3. All anchors are good, all jumps are good. (traduction alternative)

Automatisch importiert von Descente-Canyon.com für Canyon Cerni Potock Fait supérieur et inférieur. Eau glaciale surtout dans la partie supérieure.Très très glissant sur la fin. Amarrage ok. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/23686/observations.html)

Walked the upper and lower part. Super fun water level, but you have to know where to climb/jump. (traduction alternative)

Walked through the upper and lower part. Renovated a bit in the upper part. Especially the first abseil sections. Otherwise everything was tip top. (traduction alternative)

2025-07-20 | Ábris Tóth | ☆ ☆ ☆ ½ |🕮 ★ ★ |⚓ ★ | ≋ Haut | 👍 Terminé
Everything was fine. The water was not short, but not dangerous at all. The moorings in the upper part are minimalist :D (traduction alternative)

---

2025-07-05 | Horst Lambauer | ☆ ☆ ☆ ½ |🕮 ★ ★ ★ |⚓ ★ | ≋ Normale | 👍 Terminé
There are a few places in the upper part that need renovation. You can get through but especially for the inexperienced there is a place right at the beginning with about 2m where an anchor is missing and at the bottom of the pool everything is full of large stones. The lower part is tip top. The small "cave section" goes without problems. (traduction alternative)

---

2024-09-20 | Nico Schneider | ☆ ☆ ☆ |🕮 ★ |⚓ ★ | ≋ Haut | 👍 Terminé
In the upper part, the water level was almost crazy, as you always have to rappel directly in the water. In the upper part, the anchor is missing on the 3rd rappel. Bypass is orograghically out to the left and down from the tree. Please do not jump, as the 2nd step has a boulder in it that you cannot see when there is a lot of water. In the lower part the rappels are no problem from the water. Everything is outside the water line. Only the pools are sometimes very turbulent as described. (traduction alternative)

Lower half this time. Water level was the high end of low. See attached photo from bottom section entrance / top section exit. Very slippery rock - more than other canyons around. The action pieces are quite good, but not great. This is followed by a lot of tedious wet boulder hopping. The bolting is lacklustre. Although someone has been
