Matériel:

Résumé: (traduction alternative)
A classic, for experienced people, in the Bujaruelo area. It has everything water in quantity, rappels of all types, very continuous, beautiful surroundings and good waterfalls. Typical alpine canyon of cold waters and quite slippery.
It has two parts, the second, after receiving the contribution of the main tributary the Grau, much better than the first for its greater flow. Of course, almost all the rappels can be done on the outside.

Hydrologie:

Accès: (traduction alternative)
On the N260 towards Broto, we will continue until the Torla-Ordesa detour.
When you get to Torla, follow the Ordesa National Park road to Puente de los Navarros, which is where the access barrier to the park is located. There, take the track that goes to the left and goes up the Ara riverbed to San Nicolás de Bujaruelo. Park there

Approche: (traduction alternative)
We will leave to take the GR, to do this we must cross the stone bridge and take the path to the right, towards Torla. We will go along the orographic left side of the Ara river, soon we cross the Escusaneta river and arrive at the final waterfall of the Gabieto. Here we will be able to evaluate the flow.
A few meters before we take a detour to the left, which climbs steeply uphill through the forest (at times you can lose the path), until we reach about 1580m, just where the tributary Grau de Gabieto pours its waters into our ravine on the left. This is the access point for the lower part.
If we want to do the upper part we will continue climbing up to 1750m, just at the height of the cirque, here we could climb a little more to descend the 50m waterfall.

Tour: (traduction alternative)
An upper part with rappels from trees to save a large gap, even with some delicate skill in which we can use the rope to secure, until you reach the confluence with the tributary.
The lower part with more water and some narrow areas, more vertical and flowing, will delight us with its multiple waterfalls and endless adventures up to the well-known waterfall that leads to the GR.

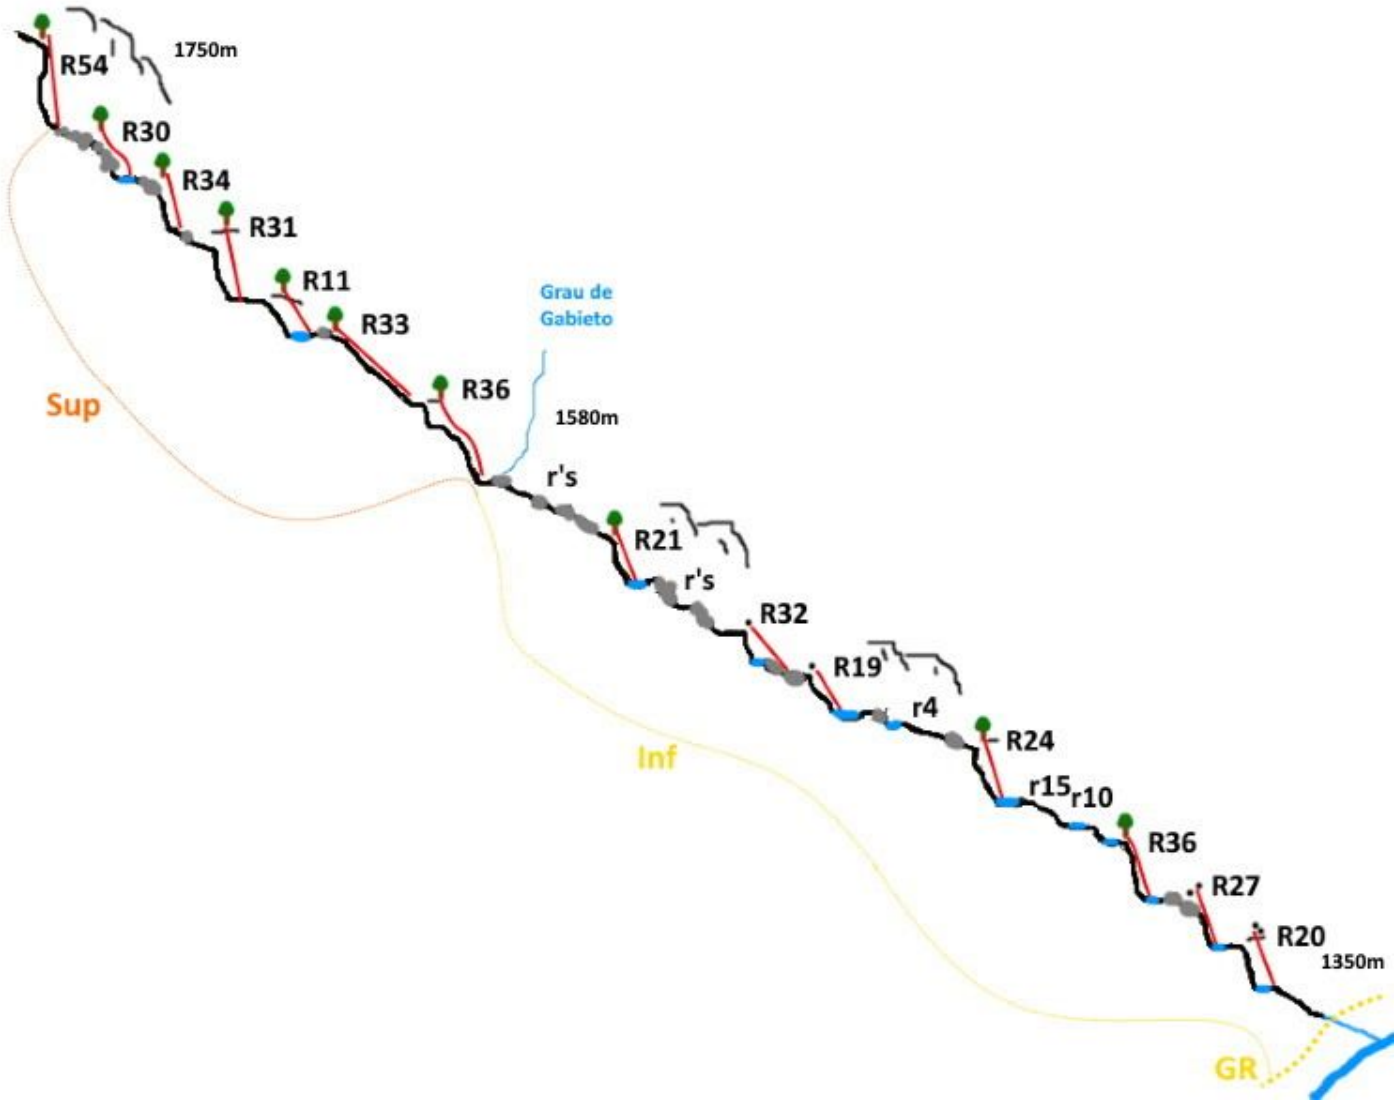

Retour: (traduction alternative)
We retrace our steps along the GR access road.
