Cordes: 1x30m

Résumé: (traduction alternative)
Hiking canyon with a few rappels that can possibly be avoided.

Hydrologie:

Accès: (traduction alternative)
We drive from Kemer on the arterial road 'Dörtyol Blv. heading west. We cross the E 90/D 400 highway and continue straight ahead for 3.2 km on Cumhunyet Cd. The two lanes later become one. After the bridge over the Agva Dere, we turn right and head orographic right along the stream. After 6.5 kilometers, we leave an old bridge on the right and then turn left (before the tarred road crosses the river to the right) onto a dirt road (2010). We ride steadily uphill. About 3.4 km after this fork in the road - a red and white marker on the right, immediately followed by a cairn - we park the car for the exit at the edge of the dirt road.
We continue uphill in the second car. This is followed by 3 hairpin bends. About 5.3 km from the fork in the road, we reach the apex of the route (two paths turn off to the right) and continue straight ahead on the main road downhill to the wide gravel banks of the Agva Dere. Park the car shortly after the ford at the widened track - 7.6 km to this point (from the fork in the road).

Approche: (traduction alternative)
From the piste directly into the stream.

Tour: (traduction alternative)
See photos and video as well as the German description in the cited link. Only a shorter version is described here.

Retour: (traduction alternative)
Get out in front of a low rock face jutting into the stream from the right. On the right, an ascending path leads away from the streambed, then winds up through the forest to the parked car.
Alternatively, you can continue along the streambed to the road bridge (170 m above sea level) - an additional 2.5 to 3 hours. Then leave the lower car at the new road bridge (about 50 m north of the above-mentioned road junction). So in the German description in the quoted link.
