Évaluation: ☆ 0 ()	**Info:** ★ 0 ()	**Belay:** ★ 0 ()

Spécialités:

Matériel:

Résumé: (traduction alternative)
Very little frequented ravine and quite forgotten, very nice, with very well formed areas alternating with others with very little interest. Few rappels that when increasing their flow make them very complicated. Attention to the final zone because it is very slippery.
Old information, if someone has something new to modify/notify it.
It will probably be necessary to reinstall all or almost all the rappels.

Hydrologie:

Accès: (traduction alternative)
We are located in Infiesto in the council of Piloña.
We will take the PI-4 to Espinaredo and Riofabar.
If we have only one vehicle we will park it in Riofabar.
With two vehicles, the return vehicle will continue to the recreational area La Pesanca, just before arriving we have the bridge over our stream and a few meters away there is a place to park.
With the access car we will return to Riofabar, to the pk 8, to take the detour that goes up to Ligüeria, where we will park.

Approche: (traduction alternative)
From Ligüeria, along the path that goes up to the Vega pass and from there south towards Ciébana and the Ciébana pass. Later we will descend diagonally towards the Pontiga, almost where the streams that form our river meet.
From Riofabar see map

Tour: (traduction alternative)
"There are 7 rappels, the largest of 13 m (the first, which is not obligatory and is "slideable"); of these, two in the initial slatey section, three in the limestone gorge, and two others in the final section in quartzite".

Retour: (traduction alternative)
We will arrive at the recreational area
